

Lockheed Martin Corporation

2025 CDP Corporate Questionnaire 2025

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

Contents

C1. Introduction

(1.1) In which language are you submitting your response?

Select from:

☒ English

(1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

☒ USD

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

☒ Publicly traded organization

(1.3.3) Description of organization

Lockheed Martin is a U.S. publicly-held global security and aerospace company headquartered in Bethesda, MD, that is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. Our mission is to solve complex challenges, advance scientific discovery and deliver innovative solutions to help our customers keep people safe. We serve both U.S. and international customers with products and services that have defense, civil and commercial applications, with our principal customers being agencies of the U.S. Government. In 2024, we employed approximately 121,000 people worldwide and generated net sales of \$71 billion. At December 31, 2024, we owned or leased building space (including offices, manufacturing plants, warehouses, service centers, laboratories and other facilities) at 356 locations primarily in the U.S. Additionally, we manage or occupy 9 government-owned facilities under lease and other arrangements. • Aeronautics \$28.6 billion in 2024 sales, 40% of our total consolidated net sales: Engages in the research, design, development, manufacture, integration, sustainment, support and upgrade of advanced military aircraft, including combat and air mobility aircraft, unmanned air vehicles and related technologies. Aeronautics also has contracts with the U.S. Government for various classified programs. • Missiles and Fire Control \$12.7 billion in 2024 sales, 18% of our total consolidated net sales: Provides air and missile defense systems; tactical missiles and precision strike weapon systems; logistics; fire control systems; mission operations support, readiness, engineering support and integration services; ground vehicles; and energy management solutions. MFC also has contracts with the U.S. Government for various classified programs. • Rotary and Mission Systems \$17.2 billion in 2024 sales, 24% of our total consolidated net sales: designs, manufactures, services and supports various military and commercial helicopters, sea- and land-based missile

defense systems, radar systems, laser systems, sea- and air-based mission and combat systems, command and control mission solutions, cyber solutions, simulation and training solutions, and services and supports surface ships. • Space \$12.5 billion in 2024 sales, 18% of our total consolidated net sales: Engages in the research and design, development, engineering and production of satellites, space transportation systems, and strategic, advanced strike, and defensive systems. Space provides network-enabled situational awareness and integrates complex space and ground global systems to help our customers gather, analyze and securely distribute critical intelligence data. Space is also responsible for various classified systems and services in support of vital national security systems. [Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

(1.4.1) End date of reporting year

10/31/2024

(1.4.2) Alignment of this reporting period with your financial reporting period

Select from:

☒ No

(1.4.3) Indicate if you are providing emissions data for past reporting years

Select from:

☒ Yes

(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for

Select from:

☒ 4 years

(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for

Select from:

☒ 4 years

(1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for

Select from:

☒ 4 years

[Fixed row]

(1.4.1) What is your organization's annual revenue for the reporting period?

71043000000

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?	How does your reporting boundary differ to that used in your financial statement?
	Select from: ☒ No	The boundary of our work is restricted to global facilities for which Lockheed Martin has operational control.

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

ISIN code - bond

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

ISIN code - equity

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

CUSIP number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

LMT

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

DPRBOZP0K5RM2YE8UU08

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

834951691

Other unique identifier

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

[Add row]

(1.7) Select the countries/areas in which you operate.

Select all that apply

☒ Canada

☒ Mexico

☒ Poland

☒ Australia

☒ United Kingdom of Great Britain and Northern Ireland

☒ United States of America

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

☒ Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

☒ Upstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

☒ Tier 1 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

☒ Tier 4+ suppliers

(1.24.7) Description of mapping process and coverage

Supplier surveying (buy part suppliers). Buyer /seller relationship mapping – tier by tier mapping based upon commerce data (bills of lading/shipping documents) limited visibility on domestic and actual parts procured. Reverse engineering subcontracted parts from engineering drawings to map actual suppliers for each tier. Mapping generally focuses on mission critical components and program impact.

[Fixed row]

(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

(1.24.1.1) Plastics mapping

Select from:

☒ No, and we do not plan to within the next two years

(1.24.1.5) Primary reason for not mapping plastics in your value chain

Select from:

☒ Not an immediate strategic priority

(1.24.1.6) Explain why your organization has not mapped plastics in your value chain

Currently we do not map plastics across the value chain. We focus on conformance to specifications for the selection and use of plastics in our products. In addition, we track impending global regulations (e.g., Global Plastics Treaty, National EPR schemes) for impact to Lockheed Martin Corporation.

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

1

(2.1.3) To (years)

3

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The short-term time horizon is associated with the long-range plan (LRP) for achieving certain sales and orders milestones. The LRP is updated annually to reflect changes in the assumptions and business environment. This time horizon represents how Lockheed Martin assesses short-term climate risks and opportunities. In 2024, we shifted the LRP to a 5-year time frame; future risk assessments will be aligned to the 5-year short term time horizon.

Medium-term

(2.1.1) From (years)

4

(2.1.3) To (years)

10

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The medium-term time horizon is associated with the duration measured by climate-related metrics and goals within the Sustainability Management Plan (SMP). This time horizon represents how Lockheed Martin assesses medium-term climate risks and opportunities.

Long-term

(2.1.1) From (years)

11

(2.1.2) Is your long-term time horizon open ended?

Select from:

☒ Yes

(2.1.4) How this time horizon is linked to strategic and/or financial planning

Our financial and strategic planning cycles are three to six years and we make some projections in ten-year cycles. Our climate targets are set over similar cycles and align with our anticipated investments to uphold our fiduciary duty to our stockholders. Setting long term quantitative targets would increase risk and cost to our company because the targets would be wholly detached from our robust and sound business planning process.
[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: ☒ Yes	Select from: ☒ Both dependencies and impacts

[Fixed row]

(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	Select from: ☒ Yes	Select from: ☒ Both risks and opportunities	Select from: ☒ Yes

[Fixed row]

(2.2.2) Provide details of your organization's process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.

Row 1

(2.2.2.1) Environmental issue

Select all that apply

☒ Climate change

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

☒ Risks

☒ Opportunities

(2.2.2.3) Value chain stages covered

Select all that apply

- ☒ Direct operations
- ☒ Upstream value chain
- ☒ Downstream value chain

(2.2.2.4) Coverage

Select from:

- ☒ Full

(2.2.2.5) Supplier tiers covered

Select all that apply

- ☒ Tier 1 suppliers

(2.2.2.7) Type of assessment

Select from:

- ☒ Qualitative and quantitative

(2.2.2.8) Frequency of assessment

Select from:

- ☒ Annually

(2.2.2.9) Time horizons covered

Select all that apply

- ☒ Short-term
- ☒ Medium-term
- ☒ Long-term

(2.2.2.10) Integration of risk management process

Select from:

- ☒ Integrated into multi-disciplinary organization-wide risk management process

(2.2.2.11) Location-specificity used

Select all that apply

- ☒ Not location specific

(2.2.2.12) Tools and methods used

Enterprise Risk Management

- ☒ COSO Enterprise Risk Management Framework
- ☒ Enterprise Risk Management

International methodologies and standards

- ☒ ISO 14001 Environmental Management Standard
- ☒ Life Cycle Assessment

Databases

- ☒ Nation-specific databases, tools, or standards
- ☒ Regional government databases

Other

- ☒ External consultants
- ☒ Internal company methods
- ☒ Materiality assessment
- ☒ Partner and stakeholder consultation/analysis
- ☒ Scenario analysis

(2.2.2.13) Risk types and criteria considered

Chronic physical

- ☒ Increased severity of extreme weather events

Policy

- ☒ Changes to international law and bilateral agreements
- ☒ Changes to national legislation

Market

- ☒ Availability and/or increased cost of raw materials
- ☒ Uncertainty in the market signals

Reputation

- ☒ Increased partner and stakeholder concern and partner and stakeholder negative feedback
- ☒ Stigmatization of sector

Technology

- ☒ Transition to lower emissions technology and products
- ☒ Unsuccessful investment in new technologies

Liability

- ☒ Exposure to litigation
- ☒ Non-compliance with regulations

(2.2.2.14) Partners and stakeholders considered

Select all that apply

- ☒ Customers
- ☒ Employees
- ☒ Investors
- ☒ Regulators
- ☒ Suppliers

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

☒ No

(2.2.2.16) Further details of process

Our enterprise risk assessment process includes an annual senior leadership survey, a subject-matter expert survey, internal audit risk evaluation, global benchmark data and strategic planning assumptions, and interviews with the Executive Leadership Team. Through this process, we identify and prioritize key risks, which are reported to the Audit Committee of the Board of Directors. Risks are prioritized based upon impact, likelihood, trends and the availability and effectiveness of controls and mitigating actions. Surveys of leaders provide an indication of concerns from a risk universe, including climate-related risks, with varying degrees of potential size and scope. Survey findings are analyzed with risk data from our Treasury function to determine overlapping strategic and operational elements that warrant consideration in the enterprise-wide risk assessment. Climate-related risks identified using global benchmark data and strategic planning assumptions are monitored by the Lockheed Martin Sustainability team and provide direct input to the risk assessment process. Our assessment includes assumptions about business, industry, and economic risk factors associated with physical and transitional climate-related risks. At the upstream, operational, and downstream levels, climate-related risks and opportunities are identified, tracked and managed through our Sustainability Management Plan. Examples that consider physical risk beyond 10 years include Lockheed Martin's renewable energy procurements and gated capital project funding, which is invested towards long-term infrastructure aimed at reducing operational energy use and carbon emissions. Looking into the future, we are addressing long-term physical and transitional risks by undertaking an ambitious carbon emission reduction goal aligned with a science-based target methodology to reduce Scope 1 and 2 absolute carbon emissions by 36% by 2030 from a 2020 baseline. This target drives lean and efficient infrastructure, processes, and operations that support our continued leadership in a changing business and regulatory environment. Through our corporate insurance purchasing program, we study risk evaluations and assessments offered by insurance carriers, related to operational climate-related weather hazards. Such risk data affects capacity, availability and pricing of certain insurance classes for business operations. At the upstream, operational, and downstream levels, acute physical risks are managed by Lockheed Martin's Business Resiliency, Business Continuity, and Global Security and Crisis Management functions. Business Resiliency ensures that resiliency capabilities are addressed through Crisis Management, Business Continuity, information technology disaster recovery, and medical response to protect human life, safeguard assets and sustain critical operations. Business Continuity outlines the preparation needed in anticipation of significant incidents that may disrupt business operations. Crisis Management promotes preparedness and response with the goal of protecting employees against injury and minimizing damage to Lockheed Martin assets.

Row 2

(2.2.2.1) Environmental issue

Select all that apply

☒ Climate change

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

(2.2.2.13) Risk types and criteria considered

Acute physical

- ☑ Drought
- ☑ Tornado
- ☑ Avalanche
- ☑ Landslide
- ☑ Wildfires
- ☑ Storm (including blizzards, dust, and sandstorms)

Chronic physical

- ☑ Heat stress
- ☑ Water stress
- ☑ Sea level rise
- ☑ Changing wind patterns
- ☑ Temperature variability

Policy

- ☑ Carbon pricing mechanisms
- ☑ Changes to international law and bilateral agreements
- ☑ Changes to national legislation

Market

- ☑ Availability and/or increased cost of raw materials
- ☑ Changing customer behavior
- ☑ Uncertainty in the market signals

Reputation

- ☑ Stigmatization of sector

Technology

- ☑ Data access/availability or monitoring systems
- ☑ Transition to lower emissions technology and products
- ☑ Transition to water intensive, low carbon energy sources

- ☑ Heat waves
- ☑ Cold wave/frost
- ☑ Cyclones, hurricanes, typhoons
- ☑ Heavy precipitation (rain, hail, snow/ice)
- ☑ Flood (coastal, fluvial, pluvial, ground water)

- ☑ Increased severity of extreme weather events
- ☑ Water availability at a basin/catchment level
- ☑ Changing temperature (air, freshwater, marine water)
- ☑ Changing precipitation patterns and types (rain, hail, snow/ice)

- ☒ Unsuccessful investment in new technologies

Liability

- ☒ Exposure to litigation
- ☒ Non-compliance with regulations

(2.2.2.14) Partners and stakeholders considered

Select all that apply

- ☒ Customers
- ☒ Local communities
- ☒ Employees
- ☒ Investors
- ☒ Suppliers
- ☒ Regulators

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- ☒ No

(2.2.2.16) Further details of process

Climate-related risks and opportunities are assessed throughout the year as individual risks. These assessments are based on our qualitative enterprise level assessment detailed below and focus on the quantification of individual risks at the most appropriate level of business (e.g., enterprise, business segment, facility). In 2018, the Lockheed Martin Sustainability team initiated a study of climate-related risk drivers to business operations in the short, medium, and long terms. Impacts for each driver were assessed (qualitatively) and scored (quantitatively) for supply chain, manufacturing operations, and business operations. The results provided a prioritized list of climate-related risk drivers that are continuously analyzed. To date, each of our US-based facilities is assessed for a variety of acute and chronic physical climate risks to understand the relative threats as a result of Lockheed Martin's geographic distribution of operations and supply chain. Although we are a global corporation, over 93% of our workforce is based in the United States. In 2020, the Lockheed Martin Sustainability team refined our climate-related risk assessment process as part of a more integrated scenario planning and analysis exercise. The refined process is based on the same climate risk drivers suggested in the Task Force on Climate-related Financial Disclosures (TCFD) documentation for physical and transitional risks, with greater distinction given to individual manifestations of acute physical risks. More than 120 distinct climate-related risks, based on 22 distinct risk drivers, were assessed based on a set of scenario parameters limiting the rise in global temperatures to 2°C and another scenario that does not limit global temperature growth. Additionally, the level of risk was determined by qualitatively assessing the likelihood and impact of each risk driver on our facilities, production operations, supply chain and workforce. Our risk assessment results, updated in 2024, will be integrated into strategic planning at the functional level and individual physical risks are being considered in business

continuity drills involving multiple facilities. Our qualitative climate-scenario analysis is based on two possible futures at the facility, production operations, workforce, and supply chain levels. One scenario restricts global temperature warming to no more than 2°C by 2100, aligning with a combined scenario of Representative Concentration Pathway (RCP) 1.9 and RCP 2.6, and the other scenario's global temperature rise exceeds 2°C by 2100, aligning with RCP 4.5 and RCP 8.5. In considering the outcome of these two scenarios, there are multiple sub-strategies used to incorporate variability in key performance measures representing both physical and transitional risks. Shared Socio-economic Pathways (SSP) and Integrated Assessment Model data are being used to determine boundaries for impact trajectories in 2030 and 2100 for both scenarios. An overview of our process begins with a qualitative risk assessment, where individual climate-related risks determined to be of potential concern are further assessed at the appropriate level of business. This approach is designed to identify potential high impact climate-related risks and then to more quantitatively focus the level of potential impact of each risk across the enterprise.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

☒ Yes

(2.2.7.2) Description of how interconnections are assessed

As described in our TCFD report <https://sustainability.lockheedmartin.com/sustainability/content/2024-climate-risk-report.pdf> There is a direct connection between assessment of drivers, related impacts, R&Os and our overall strategic/business planning.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

(2.3.1) Identification of priority locations

Select from:

☒ No, but we plan to within the next two years

(2.3.7) Primary reason for not identifying priority locations

Select from:

☒ Other, please specify :Environmental dependencies and impacts are not yet assessed but are in progress.

(2.3.8) Explain why you do not identify priority locations

In 2023, Lockheed Martin joined an aerospace sector initiative through the International Aerospace Environmental Group (IAEG) and EcoVadis. The program aims to accelerate sustainability performance in the industry and the extended supply chain. The EcoVadis methodology provides questionnaires adapted to suppliers' materiality based on their industry sector, country and company size. This initiative includes a holistic environmental assessment of the supplier's business and operations.

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

☒ Qualitative

☒ Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

☒ Direct operating costs

(2.4.6) Metrics considered in definition

Select all that apply

☒ Likelihood of effect occurring

(2.4.7) Application of definition

Lockheed Martin assesses the impacts of climate-related financial and strategic risks holistically and does not use a defined quantitative threshold. Financial and strategic impacts are evaluated qualitatively within the context of climate-related risk and the appropriate level of business. Quantitative figures are estimated for only select climate related risks and opportunities. An overview of our process begins with a qualitative risk assessment, where individual climate-related risks determined to be of concern are further assessed at the appropriate level of business. The magnitude of impact of each climate-related risk is a qualitative assessment made in relation to other climate-related physical and transitional risks to the Corporation and is not a measure of magnitude to the Corporation as a whole. This approach is

designed to identify potential high impact climate-related risks and then to more quantitatively focus the level of impact of each risk across the enterprise. At Lockheed Martin there are multiple time horizons used to note financial, strategic, and risk functions. The time horizons provided in question 2.1 specifically consider climate related risks and opportunities, and are designed to incorporate existing, more specialized time horizons. For the purposes of CDP, we define substantive impact as issues that have the potential to disrupt our business operations if not adequately mitigated. Our operations are subject to various environmental laws and regulations. The extent of our financial exposure stemming from these laws and regulations cannot be reasonably estimated in all cases. In addition to regulatory requirements, natural disasters (e.g., floods, fires, hurricanes) have the potential to cause substantive impact. However, our Business Continuity management framework proactively and adequately responds to business disruptions, identifies potential impacts, and maintains continuity of operations.

Opportunities

(2.4.1) Type of definition

Select all that apply

☒ Qualitative

(2.4.6) Metrics considered in definition

Select all that apply

☒ Time horizon over which the effect occurs

(2.4.7) Application of definition

Lockheed Martin assesses the impacts of climate-related financial and strategic risks and opportunities holistically and does not use a defined quantitative threshold. Financial and strategic impacts are evaluated qualitatively within the context of climate-related risk and the appropriate level of business. Quantitative figures are estimated for only select climate related risks and opportunities. Climate-related products and services represent the most significant climate-related opportunity for Lockheed Martin. Growing resource constraints and changes to our climate require technologies that strengthen society's resilience and solutions for monitoring and addressing impacts. As a company driven to provide technical solutions to the most complex challenges of our customers, our portfolio will expand to meet our customers' needs, including to address climate change and adaptation solutions in new markets. One such market is firefighting. Through technologies and strategic partnerships, we are venturing into new markets to strengthen climate adaptation and resiliency solutions in response to increasingly frequent and more severe wildfires. Technologies include the Sikorsky S-70™ FIREHAWK® helicopter, which is specifically designed for firefighting and associated search and rescue; and strategic partnerships, such as the partnership with NVIDIA, which includes the creation of the first AI-centric lab dedicated to predicting and responding to wildfires that will include Lockheed Martin's Cognitive Mission Manager (CMM) system, an end-to-end AI-driven planning and orchestration platform.

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

☒ Yes, both in direct operations and upstream/downstream value chain

Plastics

(3.1.1) Environmental risks identified

Select from:

☒ No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

☒ Not an immediate strategic priority

(3.1.3) Please explain

We focus on conformance to specifications for the selection and use of plastics in our products. In addition, we track impending global regulations (e.g., Global Plastics Treaty, national EPR schemes, etc.) for impact to Lockheed Martin Corporation.

[Fixed row]

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

Climate change

(3.1.1.1) Risk identifier

Select from:

☒ Risk1

(3.1.1.3) Risk types and primary environmental risk driver

Policy

☒ Carbon pricing mechanisms

(3.1.1.4) Value chain stage where the risk occurs

Select from:

☒ Direct operations

(3.1.1.6) Country/area where the risk occurs

Select all that apply

☒ Australia

☒ Canada

☒ Puerto Rico

☒ United Kingdom of Great Britain and Northern Ireland

☒ United States of America

(3.1.1.9) Organization-specific description of risk

Increased pricing of GHG emissions is considered a key potential regulatory-driven climate risk at Lockheed Martin. Based on our current operations, only the State of California operates a cap-and-trade program requiring select facilities to offset a percentage of their GHG emissions, which is not applicable to Lockheed Martin

facilities at this time. We believe the likelihood of a carbon-based tax is expected to be high as we look at our global operations in the future, initially in the EU, and the added operations cost that would accompany such a tax. Lockheed Martin seeks to understand and manage this risk by stress testing historical cost implications of localized emissions against localized energy expenditures, under multiple pricing scenarios, and through efforts to decarbonize and conserve energy based on per capita metrics. Decarbonization encompasses numerous activities to support the use of clean energy in the form of renewable energy certificate (REC) purchases, on-site renewable generation, power purchase agreements, and green tariffs. Energy conservation efforts are aimed at process and operational efficiency improvements.

(3.1.1.11) Primary financial effect of the risk

Select from:

☒ Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

☒ Long-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

☒ Likely

(3.1.1.14) Magnitude

Select from:

☒ Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Lockheed Martin seeks to understand and manage this risk by stress testing historical cost implications of localized emissions against localized energy expenditures, under multiple pricing scenarios, and through efforts to decarbonize and conserve energy based on per capita metrics. \$16.7 million is the estimated annual financial impact based on a hypothetical carbon tax target of \$20/MTCO₂e and our 2024 Scope 1 & 2 (Location Based) energy-specific emissions. We are assuming an estimated range of \$8.2M to \$82M based on hypothetical tax rates from \$10 to \$100 per MTCO₂e. This tax rate range and the tax rate of \$20/MTCO₂e used in the financial impact estimate is based on analyses conducted by our Lockheed Martin Sustainability team on recommended science-based CO₂ tax rates in 2020 and

2030, integrating various sources including the World Bank, High-Level Commission on Carbon Price, Shared Socio-Economic Pathways, and Carbon Pricing Corridors Initiative, that evaluate '1.5 °C and less' and '2°C and less' scenarios.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.23) Anticipated financial effect figure in the long-term – minimum (currency)

8207130

(3.1.1.24) Anticipated financial effect figure in the long-term – maximum (currency)

82071300

(3.1.1.25) Explanation of financial effect figure

Lockheed Martin stress tests a range of carbon pricing, which range from \$10/MT CO₂e to \$100/MT CO₂e. The values represent this range and are the combined impact estimated from direct/indirect operations.

(3.1.1.26) Primary response to risk

Compliance, monitoring and targets

☒ Establish organization-wide targets

(3.1.1.27) Cost of response to risk

40600000

(3.1.1.28) Explanation of cost calculation

The estimated cost is the level of capital investment undertaken in 2024 to improve energy efficiency and decarbonize our operations.

(3.1.1.29) Description of response

Each climate-related risk category is initially assessed by Lockheed Martin's Sustainability team. All submissions are estimations and are used to identify areas of further research. The magnitude of impact of each climate-related risk is a qualitative assessment made in relation to other climate-related physical and transitional risks to the Corporation and is not a measure of magnitude to the Corporation as a whole. In addition, the risks described in this section are not necessarily the greatest potential climate-related risks to Lockheed Martin; they are risks for which we are able to publicly provide quantitative and qualitative estimates.

Climate change

Select from:

☒ Direct operations

(3.1.1.6) Country/area where the risk occurs

Select all that apply

☒ Puerto Rico

☒ United States of America

(3.1.1.9) Organization-specific description of risk

Climate change is directly impacting the strength and pace of storms and other weather-related events. The level of impact varies based on the location of our operations and supply chain and is not limited to just coastal regions. In addition to cyclones and flooding, other weather-related events, such as tornados and wildfires, will have a continued impact on our supply chain and operations. These impacts result in disruptions in manufacturing and the livelihoods of our workforce and families. In mid-September of 2017, Hurricane Maria, a Category 4 hurricane with 155 mph winds, destroyed infrastructure in Puerto Rico, causing power and communications outages and widespread flooding for the entire island, impeding transportation. Lockheed Martin's facility in Aguadilla, Puerto Rico, was impacted by

Hurricane Maria as the site was closed over approximately a month and a half, due to loss of telecommunications. In 2017 and 2018, winter storms and other events disrupted operations on the East Coast. In 2020, the CZU Lightning Complex fire in California directly impacted our Santa Cruz facility and surrounding communities and in early 2021 F-35 production operations in Fort Worth, TX, were closed for one day due to Winter Storm Uri. In 2024, we had limited plant closures due to several hurricanes in the southeast US. As risks increase so too will the cost of operations and the potential for delays. Future weather events are expected to grow stronger, with greater impact.

(3.1.1.11) Primary financial effect of the risk

Select from:

☒ Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

☒ Long-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

☒ Very likely

(3.1.1.14) Magnitude

Select from:

☒ Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

To assess physical risk, we utilized FEMA's National Risk Index (NRI), a dataset and online tool to help illustrate the United States communities most at risk for 18 natural hazards. Of the 18 hazards, 9 are directly related to climate change: Coastal Flooding, Cold Wave, Drought, Heat Wave, Hurricane, Riverine Flooding, Strong Wind, Wildfire, and Winter Weather. The NRI provides risk hazard ratings and annual likelihood estimates by US Census Tract but does not include Puerto Rico. Global resources are also not publicly available to provide the same risk assessments, however 93% of Lockheed Martin's workforce is based in the United States. Using FEMA's methodology for Expected Annual Loss, we have modified the formula to calculate an annual Value at Risk (VaR) value based on annual insurable value for Lockheed Martin assets or contract commitments for a sampling of suppliers. The value estimated (\$200M as reported in 'Potential financial impact figure') is based on 2024 values.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.23) Anticipated financial effect figure in the long-term – minimum (currency)

0

(3.1.1.24) Anticipated financial effect figure in the long-term – maximum (currency)

200000000

(3.1.1.25) Explanation of financial effect figure

Lockheed Martin estimated the potential annualized risk exposure via a value at risk calculation. This estimate is based on US-only assets and based on individual insurable values. The loss ratio and annualized frequency of each hazard is estimated.

(3.1.1.26) Primary response to risk

Compliance, monitoring and targets

☒ Improve monitoring of direct operations

(3.1.1.27) Cost of response to risk

0

(3.1.1.28) Explanation of cost calculation

The cost to respond to climate-related physical risks is dependent on active risk mitigation through Lockheed Martin's Risk Management function and its partnerships with insurance providers. Due to the sensitive nature of details on such activities and the associated cost, in the form of premiums, we are unable to disclose an exact figure.

(3.1.1.29) Description of response

Each climate-related risk category is initially assessed by Lockheed Martin's sustainability team. All submissions are estimations and are used to identify areas of further research. The magnitude of impact of each climate-related risk is a qualitative assessment made in relation to other climate-related physical and transitional risks to the Corporation and is not a measure of magnitude to the Corporation as a whole. In addition, the risks described in this section are not necessarily the greatest potential climate-related risks to Lockheed Martin; they are risks for which we are able to provide quantitative and qualitative estimates.

Select all that apply

☒ United States of America

(3.1.1.9) Organization-specific description of risk

Increased pricing of GHG emissions is considered a key regulatory-driven climate risk at Lockheed Martin and extends to the affordability of our products, cost competitiveness in government contracts, and supply chain costs. The likelihood of a carbon-based tax is expected to be high as we look at our global supply chain in the future and the added operational cost that would accompany such a tax for our suppliers. The majority of our sales are driven by pricing based on costs incurred to produce products or perform services under contracts with the U.S. Government. Cost-based pricing is determined under the Federal Acquisition Regulation (FAR). The FAR provides guidance on the types of costs that are allowable in establishing prices for goods and services under U.S. Government contracts. We closely

monitor compliance with the consistent application of our critical accounting policies related to contract accounting. Increases in operational costs will directly affect the affordability of our products and our competitive position against industry peers.

(3.1.1.11) Primary financial effect of the risk

Select from:

☒ Increased indirect [operating] costs

Select from:

☒ Likely

(3.1.1.14) Magnitude

Select from:

☒ Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Lockheed Martin calculated the annual financial impact estimate of \$55.1M-551M based on a hypothetical carbon tax range of \$10-\$100/MTCO₂e on our 2024 Scope 3 emissions estimate for purchased goods and services and capital goods. This estimate assumes that not all Scope 3 emissions would be energy based. As energy costs are generally embedded in overall supplier costs and are often considered "allowable" under Defense Federal Acquisition Regulation Supplement (DFARS) regulation in Department of Defense acquisitions, the impact is represented as the added cost to suppliers and is not necessarily representative of the direct impact to Lockheed Martin. The tax rate range used in the financial impact estimate are based on analyses conducted by our Lockheed Martin Sustainability team on recommended science-based CO₂ tax rates in 2020 and 2030, from various sources including the World Bank, High-Level Commission on Carbon Price, Shared Socio-Economic Pathways, and Carbon Pricing Corridors Initiative, that evaluate '1.5 °C and less' and '2°C and less' scenarios.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.23) Anticipated financial effect figure in the long-term – minimum (currency)

55100350

(3.1.1.24) Anticipated financial effect figure in the long-term – maximum (currency)

551003500

(3.1.1.25) Explanation of financial effect figure

Lockheed Martin stress tests a range of carbon pricing, which range from \$10/MT CO₂e to \$100/MT CO₂e. The values represent this range and are the combined impact estimated from our supply chain.

(3.1.1.26) Primary response to risk

Diversification

☒ Increase supplier diversification

(3.1.1.27) Cost of response to risk

Financial figures are taken from risks identified above and assessed against our 2024 global revenue.

[Add row]

(3.5) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

Select from:

☒ Yes

(3.5.1) Select the carbon pricing regulation(s) which impact your operations.

Select all that apply

☒ EU ETS

(3.5.2) Provide details of each Emissions Trading Scheme (ETS) your organization is regulated by.

EU ETS

(3.5.2.1) % of Scope 1 emissions covered by the ETS

0

(3.5.2.2) % of Scope 2 emissions covered by the ETS

0

(3.5.2.10) Comment

EU ETS coverage is as defined by qualified imports into the EU under CBAM. This is currently only a reporting stage action, will full interaction with the ETS in 2026.

[Fixed row]

(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

On 16 May 2023, regulations for revising the European Union Emission Trading System (EU ETS) and the new EU Carbon Border Adjustment Mechanism (CBAM) were published in the Official Journal of the European Union. During the 2023-2025 transitional period, we filed quarterly reports with the Dutch and Polish competent

authorities on imported metal commodities. Lockheed Martin is still evaluating its risk level related to CBAM in light of the Omnibus proposal. There is a possibility that from 2026 onward, purchasing CBAM certificates will be required for our Poland entities. The EU ETS will be extended in the aviation and maritime sectors; new ETS II will cover fuels for transportation and heating. Free allowances under the EU ETS will be phased out starting in 2026.

(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

	Environmental opportunities identified
Climate change	Select from: ☒ Yes, we have identified opportunities, and some/all are being realized

[Fixed row]

(3.6.1.8) Organization specific description

Products and services represent the most significant opportunities for Lockheed Martin. As a company driven to provide technical solutions to the most complex challenges of our customers, our portfolio will expand to meet their needs, including to address climate change and adaptation solutions. Through a collaborative development and acquisition effort between NOAA and NASA, in November of 2016, Lockheed Martin completed and launched the first of four next-generation geostationary weather satellites, the Geostationary Operational Environmental Satellite-R Series (GOES-R). GOES-R was launched in 2016 and was renamed GOES-16 once it reached geostationary orbit. GOES-S was launched in March 2018 and renamed GOES-17, and GOES-T was launched in March 2022, and was renamed GOES-18 once it reached geostationary orbit. Once operational, GOES-18 took GOES-17's place tracking atmospheric rivers, floods, wildfires, drought, and other severe weather and climate phenomena over the West Coast of the United States. GOES-U the final satellite in the GOES series completed production in 2024 and was launched in June 2024.

(3.6.1.9) Primary financial effect of the opportunity

☒ Medium

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Products and services represent the most significant opportunities for Lockheed Martin. As a company driven to provide technical solutions to the most complex challenges of our customers, our portfolio will expand to meet their needs, including to address climate change and adaptation solutions. Through a collaborative development and acquisition effort between NOAA and NASA, in June of 2024, Lockheed Martin was awarded a contract to develop and build the GeoXO spacecraft, which is the next iteration of the GOES series weather satellites (Geostationary Operational Environmental Satellite). Lockheed Martin is already implementing a streamlined approach to program execution and working with NASA and NOAA to drive significant cost savings, optimize efficiency and align with the administration's plans for our nation's weather monitoring and safety capabilities. Lockheed Martin is open to and continues to offer a variety of contracting options to meet the evolving needs of our customers. Lockheed Martin invested 350 million in the development and construction of the Gateway Center near Denver, CO, that will be used as an advanced satellite manufacturing facility in support of various US Government programs. Spacecraft currently in production at the site include the Air Force's GPS III satellites, NASA's Lucy spacecraft which will explore Jupiter's Trojan asteroids, and other next-generation US Government satellites. Annualized investment was based on construction beginning in 2017.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

(3.6.1.8) Organization specific description

In our strategic planning process, we pay close attention to shifts in U.S. national security policy and listen to feedback about how our equipment is used on a forward-operating basis. Our design process focuses on building longevity and resiliency into our technology. Climate-related products and services represent the most significant climate-related opportunity for Lockheed Martin. Growing resource constraints and changes to our climate require technologies that strengthen society's resilience and solutions for monitoring and addressing impacts. As a company driven to provide technical solutions to the most complex challenges of our customers, our portfolio will expand to meet our customer needs, including to address climate change and adaptation solutions in new markets. One such market is firefighting. Through technologies and strategic partnerships, we are venturing into new markets to strengthen climate adaptation and resiliency solutions in response to increasingly frequent and more severe wildfires. Technologies include the Sikorsky S-70™ FIREHAWK® helicopter, which is specifically designed for firefighting and associated search and rescue; and strategic partnerships, such as the partnership with NVIDIA, which includes the creation of the first AI-centric lab dedicated to predicting and responding to wildfires that will include Lockheed Martin's Cognitive Mission Manager (CMM) system, an end-to-end AI-driven planning and orchestration platform.

(3.6.1.9) Primary financial effect of the opportunity

☒ Increased revenues through access to new and emerging markets

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

☒ Short-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

☒ Very likely (90–100%)

(3.6.1.12) Magnitude

Select from:

☒ Medium

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

In our strategic planning process, we pay close attention to shifts in U.S. national security policy and listen to feedback about how our equipment is used on a forward-operating basis. Our design process focuses on building longevity and resiliency into our technology. Climate-related products and services represent the most significant climate-related opportunity for Lockheed Martin. Growing resource constraints and changes to our climate require technologies that strengthen society's resilience and solutions for monitoring and addressing impacts. As a company driven to provide technical solutions to the most complex challenges of our customers, our portfolio will expand to meet our customer's needs, including to address climate change and adaptation solutions in new markets. One such market is firefighting. Through technologies and strategic partnerships, we are venturing into new markets to strengthen climate adaptation and resiliency solutions in response to increasingly frequent and more severe wildfires. Technologies include the Sikorsky S-70™ FIREHAWK® helicopter, which is specifically designed for firefighting and associated search and rescue; and strategic partnerships, such as the partnership with NVIDIA, which includes the creation of the first AI-centric lab dedicated to predicting and responding to wildfires that will include Lockheed Martin's Cognitive Mission Manager (CMM) system, an end-to-end AI-driven planning and orchestration platform.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

☒ Yes

(3.6.1.17) Anticipated financial effect figure in the short-term - minimum (currency)

396000000

(3.6.1.18) Anticipated financial effect figure in the short-term – maximum (currency)

396000000

(3.6.1.23) Explanation of financial effect figures

The approach used to generate a potential financial impact figure was by evaluating publicly available information. Specifically, financial impact is measured directly based on publicly available information on orders of contracted FIREHAWK helicopters since 2018 with expected delivery continuing through 2023 multiplied by the estimated cost of the FIREHAWK helicopter to the customer

(3.6.1.24) Cost to realize opportunity

(3.6.1.25) Explanation of cost calculation

The cost to realize the opportunity is \$353,037,000, which is the average ratio of cost of goods sold to revenues for Lockheed Martin's Rotary and Mission Systems business area in 2024 applied to the sales (396 million) in the FIREHAWK portfolio. Note that this gross profit margin may not be representative of the gross profit margin for these sales and is purely illustrative as applied in this context

(3.6.1.26) Strategy to realize opportunity

In our strategic planning process, we pay close attention to shifts in U.S. national security policy and listen to feedback about how our equipment is used on a forward-operating basis. Our customers have shaped product development based on climate-related risks and opportunities. For instance, born a Black Hawk, the Sikorsky S-70™ FIREHAWK® aircraft relies on its proven military design to endure the demands of aerial firefighting, search and rescue, and medical evacuations. The FIREHAWK helicopter plays a strategic role in wildland fire suppression and is strategically used across the western U.S. to carry firefighters and water in the same mission. 13 FIREHAWK helicopters are currently fighting fires across California, operated by CALFIRE, Los Angeles County Fire Department, and San Diego Fire Rescue Department. About nine more contracted aircraft are on the way, with the first delivered to the State of Colorado in 2023. Additionally, Lockheed Martin is in conversation with international firefighting agencies in countries such as Turkey, Croatia, Greece, Korea, and Canada. Lockheed Martin and United Rotorcraft, a division of Air Methods Corporation, recently signed a marketing teaming agreement that formalizes how both companies will collaborate to meet growing global interest in the FIREHAWK helicopter. The agreement will enable the team to identify demand, and more quickly build and configure new production FIREHAWK helicopters for government agencies worldwide that require a highly effective solution to attack increasingly deadly wildland fires. In 2021, NVIDIA and Lockheed Martin joined in partnership to utilize artificial intelligence and digital-twin simulations to respond more quickly and effectively to wildfires while reducing risk to fire crews and residents. Through this partnership, Lockheed Martin and NVIDIA are working with the US Department of Agriculture Forest Service and Colorado Division of Fire Prevention and Control Funding to build the world's first artificial intelligence-centric lab dedicated to predicting and responding to wildfires.

We believe that we have a responsibility to operate our own facilities with efficient use of resources and to minimize environmental impacts. Our Go Green program drives operational improvements by reducing carbon emissions through energy efficiency and use of renewable energy. Investing in capital and operational projects that improve resource efficiency is key to reducing emissions. This work is overseen by our Board of Directors, which receives performance updates at least twice per year from our Senior Vice President, Ethics and Enterprise Assurance and our Vice President, Environment, Safety, Health and Sustainability. Multiple corporate policies guide our approach to green building standards, energy efficiency, strategic energy procurement and use of renewable energy. Our ISO 14001-certified enterprise Environment, Safety and Health Management System drives continuous improvement and commits all business areas to operating in a manner that protects the environment, conserves natural resources, prevents pollution and reduces and actively manages associated risks.

(3.6.1.13) Effect of the opportunity on the financial position, financial performance and cash flows of the organization in the reporting period

In 2024, our teams completed 67 energy efficiency projects that are estimated to avoid 31 million kilowatt-hours (kWh) of electricity, 78,000 million British thermal units (MMBTU) of natural gas and \$3.9 million in utility and maintenance costs annually. Project examples include compressed air system upgrades, conversion to energy-efficient lighting, building management system upgrades and retro commissioning, focus on analytics and fault detection for heating, ventilation and air conditioning (HVAC) systems, and critical assets on the manufacturing floor. Teams also focused on efficiency opportunities associated with large cleanrooms, working with our two largest cleanroom sites to reduce airflow when the rooms are not occupied or where air change rates exceed what is required. Additionally, our site in Marietta, GA is notably reducing its use of energy and natural gas on a large steam system. Crossover valves installed in 2023 led to an estimated annual emission savings of 814 metric tons CO₂e (MTCO₂e). The project also revealed the possibility of converting two of the four steam mains to hot water supply and return mains. Anticipated to be completed in 2026, the project is expected to yield an estimated additional emission savings of 4,250 MTCO₂e annually and a water consumption savings of more than 5 million gallons a year.

(4.1.1.1) Board-level oversight of this environmental issue

Select from:

☒ No, and we do not plan to within the next two years

(4.1.1.2) Primary reason for no board-level oversight of this environmental issue

Select from:

☒ Not an immediate strategic priority

(4.1.1.3) Explain why your organization does not have board-level oversight of this environmental issue

Biodiversity was not identified as priority during our most recent formal materiality assessment completed in 2024. As a part of our ongoing sustainability program, we periodically assess the topic and will do so again during our next formal materiality assessment. Beyond our core sustainability strategy, we take further measures by continuing our commitment to sustainability and environmental stewardship by operating our facilities in a manner that respects the environment and protects biodiversity. We also take active steps to manage our business to mitigate environmental risk and safeguard valuable ecosystems. We comply with all applicable environmental regulations and adopt measures that foster biodiversity in the communities where we operate.

[Fixed row]

(4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board's oversight of environmental issues.

Climate change

(4.1.2.1) Positions of individuals or committees with accountability for this environmental issue

Select all that apply

- ☒ Chief Executive Officer (CEO)
- ☒ Chief Sustainability Officer (CSO)
- ☒ Board-level committee
- ☒ Other, please specify :The Nominating and Corporate Governance Committee (Governance Committee)

(4.1.2.2) Positions' accountability for this environmental issue is outlined in policies applicable to the board

Select from:

- ☒ Yes

(4.1.2.3) Policies which outline the positions' accountability for this environmental issue

Select all that apply

- ☒ Other policy applicable to the board, please specify :Corporate Policy Statement CPS-803 Sustainability

(4.1.2.4) Frequency with which this environmental issue is a scheduled agenda item

Select from:

- ☒ Scheduled agenda item in some board meetings – at least annually

(4.1.2.5) Governance mechanisms into which this environmental issue is integrated

Select all that apply

- | | |
|---|---|
| ☒ Reviewing and guiding annual budgets | ☒ Overseeing and guiding public policy engagement |
| ☒ Overseeing the setting of corporate targets | ☒ Reviewing and guiding innovation/R&D priorities |

- ☒ Monitoring progress towards corporate targets
- ☒ Overseeing and guiding value chain engagement
- ☒ Approving corporate policies and/or commitments
- ☒ Overseeing reporting, audit, and verification processes
- ☒ Overseeing and guiding the development of a business strategy
- ☒ Overseeing and guiding acquisitions, mergers, and divestitures
- ☒ Monitoring supplier compliance with organizational requirements
- ☒ Monitoring compliance with corporate policies and/or commitments
- ☒ Reviewing and guiding the assessment process for dependencies, impacts, risks, and opportunities
- ☒ Approving and/or overseeing employee incentives
- ☒ Overseeing and guiding major capital expenditures
- ☒ Monitoring the implementation of the business strategy

(4.1.2.7) Please explain

The Chairman, President and CEO (CEO) has responsibility for climate-related issues for Lockheed Martin. The CEO has reviewed development of and reporting on Lockheed Martin's Sustainability Management Plan, which includes goals related to carbon emissions and renewable energy. The Nominating and Corporate Governance Committee of the Board of Directors has responsibility for climate-related matters for Lockheed Martin. This committee oversees performance in corporate responsibility, climate and environmental stewardship, and other related matters—all inextricably linked to our sustainability commitments. Annually, members of the Nominating and Corporate Governance Committee review company performance against the Sustainability Management Plan and the sustainability report. In 2024, members of the Nominating and Corporate Governance Committee reviewed company performance against the Sustainability Management Plan and the sustainability report, including progress reports as well as metrics against our climate goals and performance. The Chief Sustainability Officer (CSO) briefs this committee on progress towards achieving climate-related goals throughout the year.

[Fixed row]

(4.2) Does your organization's board have competency on environmental issues?

Climate change

(4.2.1) Board-level competency on this environmental issue

Select from:

- ☒ Yes

(4.2.2) Mechanisms to maintain an environmentally competent board

Select all that apply

- ☒ Consulting regularly with an internal, permanent, subject-expert working group
- ☒ Integrating knowledge of environmental issues into board nominating process
- ☒ Having at least one board member with expertise on this environmental issue

(4.2.3) Environmental expertise of the board member

Experience

- ☒ Executive-level experience in a role focused on environmental issues
- ☒ Management-level experience in a role focused on environmental issues
- ☒ Staff-level experience in a role focused on environmental issues
- ☒ Experience in an organization that is exposed to environmental-scrutiny and is going through a sustainability transition
- ☒ Active member of an environmental committee or organization

[Fixed row]

(4.3) Is there management-level responsibility for environmental issues within your organization?

	Management-level responsibility for this environmental issue

(4.3.1.6) Please explain

The VP Environment, Safety, Health and Sustainability (ESHS) oversees Lockheed Martin's sustainability, environmental, and health and safety strategy (implementation), activities and progress. This includes a significant focus on the management of environmental (including biodiversity) and climate-related matters. The VP ESHS reports directly to the Sr. Vice President of Ethics and Enterprise Assurance, our chief sustainability officer. The Sustainability Management Team, chaired by the Director of Sustainability, who reports to the VP ESHS, convenes regularly to review Sustainability Management Plan progress, review opportunities for program enhancement and share internal and external insights and best practices. The ESH Leadership Council, chaired by the VP ESHS, convenes regularly to provide oversight of environmental, and health and safety strategy, activities and progress, including management of environmental (including biodiversity) and operational climate-related matters. The VP ESHS is a member of the Risk and Compliance Committee.

[Add row]

(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?

Climate change

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

☒ Yes

(4.5.2) % of total C-suite and board-level monetary incentives linked to the management of this environmental issue

30

(4.5.3) Please explain

Lockheed Martin's executive team and various business leaders who are responsible for achieving climate and environmental sustainability targets may receive financial incentives as part of their incentive compensation based on enterprise performance commitments. These commitments are measured on an annual basis. In 2024, these criteria included performance towards the goal of stewarding our climate responsibly, which includes GHG emission reductions. At its February 2024 meeting, the Compensation Committee approved enterprise-wide objectives for 2024 reflecting financial and strategic and operational goals. Strategic & Operational Assessment (30% Weight): At the start of 2024, the Compensation Committee established a broad set of goals for our strategic and operational commitments, including goals tied to enterprise performance, new business and growth, strategy and responsible business. See our Proxy Statement (p. 51) for details.
[Fixed row]

(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).

Climate change

(4.5.1.1) Position entitled to monetary incentive

Board or executive level

☒ Corporate executive team

(4.5.1.2) Incentives

Select all that apply

☒ Bonus - % of salary

(4.5.1.3) Performance metrics

Targets

- ☒ Progress towards environmental targets
- ☒ Achievement of environmental targets

Emission reduction

- ☒ Reduction in absolute emissions

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

- ☒ Short-Term Incentive Plan, or equivalent, only (e.g. contractual annual bonus)

(4.5.1.5) Further details of incentives

Our compensation programs are designed to provide a mix of short- and long-term compensation, fixed and variable pay and cash and equity-based compensation, as well as to reflect our philosophy of providing pay for performance. The 2024 annual incentive plan for our CEO, other NEOs and all other officers elected by the Board was based 70% on financial goals and 30% on strategic and operational goals measured at the enterprise level. For the 2024 performance year, a broad set of goals was established for our strategic and operational commitments at the beginning of the year, including goals tied to enterprise performance, new business and growth, strategy and responsible business. These strategic and operational performance goals are both quantitative and qualitative in nature and measured against pre-established criteria using a scorecard approach. Responsible business goals include, amongst others, to manage the environmental impact of our business by meeting or exceeding greenhouse gas reduction goals. For details please see our 2025 proxy statement p. 47-51.

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

The objective to manage the environmental impact of our business and achieve defined greenhouse gas reduction goals, as well as related incentives described above, contribute directly to the implementation of Lockheed Martin's sustainability strategy and commitments, in particular to our Sustainability Management Plan (SMP) priority 'Advance resource stewardship' and climate-related goals outlined in the SMP.

(4.6) Does your organization have an environmental policy that addresses environmental issues?

	Does your organization have any environmental policies?
	Select from: ☒ Yes

[Fixed row]

(4.6.1) Provide details of your environmental policies.

Row 1

(4.6.1.1) Environmental issues covered

Select all that apply

☒ Climate change

(4.6.1.2) Level of coverage

Select from:

☒ Organization-wide

(4.6.1.3) Value chain stages covered

Select all that apply

☒ Direct operations

(4.6.1.4) Explain the coverage

Our Sustainability Policy (CPS-803) states that the Lockheed Martin sustainability program applies to all Lockheed Martin elements (as defined in CRX-003, Policies and Procedures), employees, the Board of Directors, and others who represent or act for us. Sustainability enhances value and provides for the long-term preservation and stewardship of environmental, social, and financial capital. Sustainability is part of our business strategy, which shapes our mission and informs our choices. As such we seek to improve global society in a way that respects and ultimately benefits people, communities, and the planet; advances technological and

economic development; and fosters physical security. We will communicate honestly and openly and hold ourselves accountable to deliver consistently what we promise to our constituents - customers, stockholders, employees, partners, suppliers, and communities. We seek to go beyond compliance to minimize any negative consequences of our business activities.

(4.6.1.5) Environmental policy content

Environmental commitments

- ☒ Commitment to comply with regulations and mandatory standards
- ☒ Commitment to stakeholder engagement and capacity building on environmental issues

Additional references/Descriptions

- ☒ Description of impacts on natural resources and ecosystems
- ☒ Reference to timebound environmental milestones and targets
- ☒ Other additional reference/description, please specify :We will seek to minimize the negative consequences of our business activities and decisions on our stakeholders by minimizing harm to the environment and conserving natural resources, promoting workplace safety, ensuring accuracy and transparency.

(4.6.1.6) Indicate whether your environmental policy is in line with global environmental treaties or policy goals

(4.6.1.4) Explain the coverage

Our Environment, Safety and Health Policy (CPS-015) states that Lockheed Martin is committed to operating in a manner that prevents environmental, safety and health (ESH) accidents and incidents, actively manages risk, conserves natural resources, protects the environment, and ensures the safety of employees, contractors and the public. Our ESH policy applies to all Lockheed Martin operations and outlines responsibilities for its successful implementation across the corporation. Our ESH policy provides key processes and integration methods for managing the ESH aspects of our business. This policy requires the responsible executive and the Vice President Environment, Safety, Health and Sustainability will ensure that entities controlled (but not wholly owned) by the Corporation (normally an ownership interest in excess of 50%) adopt appropriate controls and take the steps necessary to comply with the intent of our ESH policy. Details on the policy are made available through our website <https://www.lockheedmartin.com/en-us/who-we-are/eesh.html>

(4.10.1) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

Select from:

☒ Yes

(4.10.2) Collaborative framework or initiative

Select all that apply

☒ Other, please specify :International Aerospace Environmental Group (IAEG)

(4.10.3) Describe your organization's role within each framework or initiative

Lockheed Martin collaborates with industry partners to help address global environmental challenges such as through the International Aerospace Environmental Group (IAEG). Further information can be found on their website: <https://www.iaeg.com/membership/members/> Through this engagement, Lockheed Martin joins other aerospace and defense companies to promote the development of voluntary consensus standards and provide accessible solutions for key environmental issues.

[Fixed row]

(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?

(4.11.1) External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the environment

Select all that apply

- ☒ Yes, we engaged indirectly through, and/or provided financial or in-kind support to a trade association or other intermediary organization or individual whose activities could influence policy, law, or regulation

(4.11.2) Indicate whether your organization has a public commitment or position statement to conduct your engagement activities in line with global environmental treaties or policy goals

Select from:

- ☒ No, and we do not plan to have one in the next two years

(4.11.5) Indicate whether your organization is registered on a transparency register

Select from:

- ☒ Yes

(4.11.6) Types of transparency register your organization is registered on

Select all that apply

- ☒ Mandatory government register
☒ Voluntary government register

(4.11.7) Disclose the transparency registers on which your organization is registered & the relevant ID numbers for your organization

The transparency registers on which Lockheed Martin is registered include those listed below: EU Transparency Registry (REG Number 375910591885-85) Finnish Transparency Register (Register Number LOC-24-1125-T) US Lobbying Disclosure Act (Registrant ID 31145, Senate ID 23031-12, House ID 311450000)

(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan

Lockheed Martin has a robust compliance function that supports the alignment of our external engagement activities to our corporate goals and responsibilities, including but not limited to environmental matters.

[Fixed row]

(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.

Row 1

(4.11.2.1) Type of indirect engagement

Select from:

☒ Indirect engagement via a trade association

(4.11.2.4) Trade association

North America

☒ US Chamber of Commerce

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

☒ Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

☒ Mixed

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

☒ No, we did not attempt to influence their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

The U.S. Chamber believes that there is much common ground on which all sides of this discussion could come together to address climate change with policies that are practical, flexible, predictable, and durable. It promotes policy approaches that are supported by market-based solutions, developed through bipartisan legislation in Congress, and acknowledge the costs of action and inaction and the competitiveness of the U.S. economy. We work with policymakers to forge climate solutions and engage in the United Nations COP on behalf of the business community.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

100000

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

Where Lockheed Martin pays trade association dues in excess of 25,000 or more in a single year, we report these dues in ranges of 25,000. In this case, US Chamber of Commerce received less than 100,000 in dues. Lockheed Martin contributes to public policy debates by participating in trade and industry associations, as well as engaging directly in advocacy and grassroots communications efforts. In the U.S. we advocate strong national defense, sustained space exploration, corporate tax issues (including tax incentives for corporate research and development), export policy and international trade spectrum, and other top priorities.

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

☒ No, we have not evaluated

Row 2

(4.11.2.1) Type of indirect engagement

Select from:

☒ Indirect engagement via a trade association

(4.11.2.4) Trade association

North America

☒ National Association of Manufacturers

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

☒ Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

☒ Mixed

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

☒ No, we did not attempt to influence their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

The NAM position on environmental issues is detailed here: <https://nam.org/issues/environment-and-sustainability/> We do not use trade associations for any climate related policies, other than ensuring that reporting requirements are actually achievable and meet the stated purpose of the requirement, consistent with the NAM stated Manufacturer Priorities.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

295000

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

Lockheed Martin contributes to public policy debates by participating in trade and industry associations, as well as engaging directly in advocacy and grassroots communications efforts. In the U.S. we advocate strong national defense, sustained space exploration, corporate tax issues (including tax incentives for corporate research and development), export policy and international trade spectrum, and other top priorities.

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

☒ No, we have not evaluated

Row 3

(4.11.2.1) Type of indirect engagement

Select from:

☒ Indirect engagement via a trade association

(4.11.2.4) Trade association

North America

☒ Other trade association in North America, please specify :Professional Services Council (PSC)

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

☒ Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

☒ Mixed

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

☒ No, we did not attempt to influence their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

In comments submitted on the Enhancement and Standardization of Climate-Related Disclosures for Investors proposed rule, PSC urged the Commission to research, leverage, and if necessary, build upon existing reporting requirements in any final rule rather than create duplicative ones that add to a company's compliance costs without offering novel data or information. PSC also noted that the SEC should make every effort to limit climate-related disclosure requirements to information that is material to investors' decisions. We do not use trade associations for any climate related policies, other than ensuring that reporting requirements are actually achievable and meet the stated purpose of the requirement.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

69000

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

Lockheed Martin contributes to public policy debates by participating in trade and industry associations, as well as engaging directly in advocacy and grassroots communications efforts. In the U.S. we advocate strong national defense, acquisition policy, sustained space exploration, development of alternative energy technologies, corporate tax issues (including tax incentives for corporate research and development), export policy and international trade spectrum, and other top priorities.

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

☒ No, we have not evaluated

[Add row]

Direct interaction with climate

☑ On asset values, on the corporate

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Lockheed Martin evaluates the estimated relative likelihood and impact of climate-related risks and opportunity drivers on our facilities (any site under Lockheed Martin operational control), production operations, workforce, and supply chain. Each stakeholder category represents a unique application of adaptation or mitigation within our value chain. For each scenario there are multiple sub-strategies used to incorporate variability in key performance measures representing both physical and transition drivers and risks. These scenarios use the Shared Socioeconomic Pathways (SSP) and Integrated Assessment Model data to determine boundaries for physical and transition changes projected in 2030 (near) and 2100 (long). The SSPs provide insight into the extent that policy and socioeconomic drivers will need to shift globally, and regionally, to achieve each desired physical outcome in terms of global average temperature rise. SSP119 and SSP126 are used to set the parameters for our Below 2°C scenario and align with physical climate projections under RCP 1.9 and RCP 2.6, respectively. The Above 2°C scenario utilizes SSP245 and SSP585 as more extreme cases of physical change. These SSPs align with RCPs 4.5 and 8.5, respectively. More than 120 distinct climate-related risks, based on 22 distinct risk drivers, are assessed under both hypothetical scenarios. Risks are assessed based on their anticipated likelihood and the relative impact of each risk driver on our facilities, production operations, workforce and supply chain. Based on our methodology, the risk assessments identified that we may face increased physical risk from extreme weather and transition risk because of unabated emissions.

(5.1.1.11) Rationale for choice of scenario

Our qualitative scenarios are based on two hypothetical futures: global temperatures warming to no more than 2°C by 2100 (aligning with Representative Concentration Pathway (RCP) 1.9 and RCP 2.6); and global temperatures rising above 2°C by 2100 (aligning with RCP 4.5 and RCP 8.5). These scenarios draw on scientific data to project the potential effects of climate change and global warming, and the socioeconomic requirements projected to meet different global transition strategies.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Lockheed Martin evaluates the estimated relative likelihood and impact of climate-related risks and opportunity drivers on our facilities (any site under Lockheed Martin operational control), production operations, workforce, and supply chain. Each stakeholder category represents a unique application of adaptation or mitigation within our value chain. For each scenario there are multiple sub-strategies used to incorporate variability in key performance measures representing both physical and transition drivers and risks. These scenarios use the Shared Socioeconomic Pathways (SSP) and Integrated Assessment Model data to determine boundaries for physical and transition changes projected in 2030 (near) and 2100 (long). The SSPs provide insight into the extent that policy and socioeconomic drivers will need to shift globally, and regionally, to achieve each desired physical outcome in terms of global average temperature rise. SSP119 and SSP126 are used to set the parameters for our Below 2°C scenario and align with physical climate projections under RCP 1.9 and RCP 2.6, respectively. The Above 2°C scenario utilizes SSP245 and SSP585 as more extreme cases of physical change. These SSPs align with RCPs 4.5 and 8.5, respectively. More than 120 distinct climate-related risks, based on 22 distinct risk drivers, are assessed under both hypothetical scenarios. Risks are assessed based on their anticipated likelihood and the relative impact of each risk driver on our facilities, production operations, workforce and supply chain. Based on our methodology, the risk assessments identified that we may face increased physical risk from extreme weather and transition risk because of unabated emissions.

(5.1.1.11) Rationale for choice of scenario

Our qualitative scenarios are based on two hypothetical futures: global temperatures warming to no more than 2°C by 2100 (aligning with Representative Concentration Pathway (RCP) 1.9 and RCP 2.6); and global temperatures rising above 2°C by 2100 (aligning with RCP 4.5 and RCP 8.5). These scenarios draw on scientific data to project the potential effects of climate change and global warming, and the socioeconomic requirements projected to meet different global transition strategies.

[Add row]

(5.1.2) Provide details of the outcomes of your organization's scenario analysis.

Climate change

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- ☒ Risk and opportunities identification, assessment and management
- ☒ Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

- ☒ Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

The results enhanced our climate related risk assessment by allowing us to classify risk drivers by scoring quadrant: "High/High", "High/Low", "Low/High", "Low/Low". The classification is relevant to a "Below 2.0C" vs. "Above 2.0C" scenario comparison. All risk drivers, except those classified as "Low/Low", are considered for further analysis and quantification. Those classified as "High/High" are considered most probable, as the risk is high regardless of scenario. From this analysis we found physical acute and chronic risks and transitional risks based on GHG emissions and the prospect of carbon pricing. Quantitative modelling and analysis was executed to determine the estimated financial impact of high risk climate-related drivers. Physical acute and chronic risks were assessed using a value at risk method for assessing the scale and probability of loss occurring at our Go Green operational sites and select suppliers in the United States by type of risk event. Additional scenario analysis was applied to understand the prospective range of impacts expected based on geolocated risks and the 2021 insurable value of assets. Transitional risks are quantitatively assessed based on the level of GHG emissions, medium term decarbonization and renewable electricity targets (i.e., < 10yrs), and projected pricing of carbon pricing mechanisms. Climate scenarios were applied at the 1.9C, 2.4C, and 4.5C projected futures according to the Shared Socio-economic Pathways (SSP).). In 2022, Lockheed Martin decided to increase capital funding as of the following year (2023) for energy efficiency and renewable energy projects in order to reduce Scope 1 and 2 GHG emissions in the long term. These investments reduce the long-term risks posed by the prospect of future costs as a result of a regulatory price on carbon. The timeframe is 1 year for initialization and >10 years for measurable impacts.

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

- ☒ No and we do not plan to develop a climate transition plan within the next two years

(5.2.15) Primary reason for not having a climate transition plan that aligns with a 1.5°C world

Select from:

- ☒ Other, please specify :While Lockheed Martin does have carbon reduction goals and reports both our GHG emissions and climate related risk, we do not currently have a Climate Transition Plan.

(5.2.16) Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world

At this time, it is not feasible for Lockheed Martin to state a timeline for setting 1.5°C aligned Scope 3 emissions reduction goals or a climate transition plan due to the unique challenges the company faces in reporting Scope 3 emissions. The end-users of our products are sovereign governments that are not obligated to report on, or make commitments regarding, Scope 3 goals. The lack of an applicable and relevant framework for setting Scope 3 emissions targets for the defense industry and its shared supply chain further limits our current ability. Our climate targets are integrated with our overall financial and strategic planning cycles, which are set over three to five years, and we make some projections in ten-year cycles. Setting long-term climate targets detached from these planning cycles would increase risk and cost to our company because the targets would be wholly detached from our robust and sound business planning processes.

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Lockheed Martin develops technologies that continuously monitor the climate from space to sea to support our customers in protecting and strengthening global infrastructure. Our business strategy related to climate change is influenced by our stakeholders including employees, academic institutions, investors, non-governmental organizations, customers, policy organizations, suppliers and analysts through our Core Issues Assessment process. Our Sustainability Management Plan includes an Advancing Resource Stewardship sustainability priority. This priority contains an Energy Management related goal to annually increase carbon removal technology, installation, investment, and support. In addition, growing resource constraints and changes to our climate require technologies that strengthen society's resilience and solutions for addressing impacts. Lockheed Martin's Firefighting Intelligence aims to bring advanced capabilities from the frontline to the fire line. Lockheed Martin is applying our 21st Century Security technology to help first responders stay Ahead of Ready as wildfires are growing in size, intensity, and frequency across the globe. These conditions can overwhelm existing response capabilities and pose a significant threat to our lives, property, environment and security.

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Our expectations of suppliers with respect to climate-related risks and opportunities are publicly outlined in the Supplier Code of Conduct and our Sustainable Supply Chain Management web page. These expectations align with Lockheed Martin's corporate-wide environmental stewardship program, known as Go Green, and are developed in consideration of climate risks and opportunities. Through our Supplier Code of Conduct, we expect our suppliers to operate in a manner that actively manages risk, conserves natural resources, prevents pollution, and protects the environment. We expect our suppliers to apply environmental management system principles in order to establish a systematic approach to the management of risks/hazards and opportunities associated with the environment, including potential risk from regulatory non-compliance, reputational loss, as well as opportunities for business growth through operational and product stewardship. We also ask each supplier to reduce packaging waste from their facilities, investigate the use of reusable packaging at sites with high volume, follow Lockheed Martin's Sustainable Packaging Guidelines, and identify and share how their company's product lines can assist with our sustainability objectives. Lockheed Martin prescribes Sustainable Packaging Guidelines to all vendors. The criteria blend broad climate objectives with business considerations and strategies that address environmental concerns related to the life cycle of packaging. Packaging was identified as a large component of Lockheed Martin's waste stream going to landfill. As part of Lockheed Martin's Go Green program, we are encouraging our suppliers to use these Guidelines to improve their packaging solutions. Climate-related issues that have led to opportunities in Lockheed Martin's value chain include the reclamation of precious metals at the end of our product life cycle. For example, at our facility in Fort Worth, TX, gold-containing gap and fastener material used in the production of aircraft is transported to a certified waste vendor for precious metals reclamation. Although the magnitude of this impact is low, the gold recovery at the end of our value stream replaces waste management costs with revenues.

Investment in R&D

- ☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

According to life-cycle-based assessments, the biggest environmental impact within our direct business operations relates to energy use and greenhouse gas (GHG) emissions. Although these emissions are small compared to the estimated emissions of our products (70% overall) in use by our customers, we believe that we have a responsibility to operate our own facilities with efficient use of resources and to minimize environmental impacts. Our Go Green program objective is to reduce environmental, operational, and cost risks in our business practices and facility processes. Each year, teams of energy and water experts across the corporation evaluate potential energy and water savings projects. Based on their findings, we invest significantly to improve our facilities' efficiency, including through HVAC systems, controls, cooling towers, irrigation, and lighting. We have also partnered with the U.S. Department of Energy's Better Plants Program and the U.S. Environmental Protection Agency's ENERGY STAR Program. In 2023, we released two updated carbon-related goals that have helped us to accelerate our carbon reduction and renewable energy strategies and align with a Well Below 2C climate scenario for Scope 1 and 2 emissions. These targets support lean and efficient infrastructure, processes, and operations, as well as our continued leadership in a changing business and regulatory environment.

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- ☒ Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

The Go Green gated capital program, managed by Lockheed Martin's Environment, Safety, Health and Sustainability (ESHS) function, is a financial planning process through which energy efficiency projects are evaluated to ensure those projects meet specific return on investment criteria and will deliver facility resiliency. On an annual cycle, sites from across business areas submit potential energy and water efficiency projects to ESHS for review. Technically sound projects that meet certain financial thresholds are earmarked as Go Green gated capital and are included in the respective business area's overall capital plan. Once part of the approved annual plan, progress towards Go Green project completion is briefed twice a year to the executive Facility Strategy Governance Board to ensure progress towards energy and decarbonization goals. In 2024, our teams completed 68 energy efficiency projects that resulted in annual savings of 29 million kilowatt hours (kWh) of electricity and 78,000 million British thermal units (MMBtu) of natural gas and avoided 4.7 million in utility and maintenance costs. Examples of projects completed across our business include LED lighting upgrades, continued conversion of steam to hot water heating, and building management system upgrades that enable more efficient operations and maintenance. This Go Green gated capital cycle is a centerpiece of our energy reduction and renewable energy strategy whereby projects that meet certain performance and financial thresholds are added to each business area's overall capital plan. To encourage ideas and actions that reduce emissions, we educate employees about Go Green through internal and external communications, educational webinars and Earth Day and Energy Action Month celebrations. We recognize employee projects that contribute to our reduced impact on the environment through awards programs, including our Environment, Safety and Health Excellence Awards and Facilities Leadership Awards. We also seek external recognition through partner organizations, such as the U.S. Environmental

Protection Agency's ENERGY STAR program and the U.S. Department of Energy's Better Plants program. Additionally, we have programs in place to evaluate power purchase opportunities that support renewable energy sources. In 2021, our largest site, located in Fort Worth, TX, entered into an agreement to purchase power generated by a 15-megawatt solar facility in west Texas over a 15-year period.

(5.11.6.12) Comment

In 2024, we achieved our 2025 target to implement a third-party validated supplier sustainability assessment program to include outreach to suppliers representing 60% of our spend. Through the implementation of our assessment program, we engaged over 70% of our suppliers by spend and received completed assessments from 33% in the first year of implementation. The engagements included webinars, trainings and communications.

(5.11.7) Provide further details of your organization's supplier engagement on environmental issues.

Climate change

(5.11.7.2) Action driven by supplier engagement

Select from:

- ☒ Emissions reduction

(5.11.7.3) Type and details of engagement

Capacity building

- ☒ Provide training, support and best practices on how to make credible renewable energy usage claims
- ☒ Provide training, support and best practices on how to measure GHG emissions
- ☒ Provide training, support and best practices on how to mitigate environmental impact

Information collection

- ☒ Collect GHG emissions data at least annually from suppliers

Innovation and collaboration

- ☒ Collaborate with suppliers on innovations to reduce environmental impacts in products and services
- ☒ Collaborate with suppliers on innovative business models and corporate renewable energy sourcing mechanisms

- ☒ Invest jointly with suppliers in R&D of relevant low-carbon technologies

(5.11.7.4) Upstream value chain coverage

Select all that apply

- ☒ Tier 1 suppliers

(5.11.7.5) % of tier 1 suppliers by procurement spend covered by engagement

Select from:

- ☒ 51-75%

(5.11.7.6) % of tier 1 supplier-related scope 3 emissions covered by engagement

Select from:

- ☒ None

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

As the founding corporate sponsor of the RENEWAY program, we continued to build on the program from its 2023 launch. In 2024, our efforts shifted towards providing free training and educational resources to small business manufacturing suppliers in ideal regions with a clean grid. Through supplier engagement webinars, we empowered these suppliers to enter the renewable energy market and take advantage of more affordable collective agreements for procuring renewable electricity. By doing so, we aimed to further support our aerospace and defense supply chain in transitioning to cleaner energy sources. In 2023, Lockheed Martin joined other leading aerospace and defense companies in the utilization of International Aerospace Environmental Group (IAEG) Sustainability Assessments powered by EcoVadis. This aerospace sector initiative is a voluntary program that aims to accelerate sustainability performance in the industry and the extended supply chain. The vision for the initiative is to embrace a common approach to sustainability assessments with a shared results pool for voluntary and unilateral consideration and use by IAEG members and suppliers. This better equips IAEG member companies to enable business decisions, regulatory reporting, Duty of Care Compliance obligations, sustainability reporting, and drive positive change in environmental & social topics. In addition, by embracing a common approach, suppliers benefit from completing only one sector-level assessment rather than multiple assessments. In 2023, hundreds of suppliers attended supplier-focused webinars that highlighted how the sector was focused on enabling insights powered by the sustainability assessment program and empowering suppliers with information to prepare them for a meaningful inaugural assessment. Industry engagement in the program has continued to grow and, in 2024, this sector program yielded nearly 5,000 supplier scorecards, up from 1,000 in the sector program's inaugural year. In 2024, Lockheed Martin achieved our internal company target to implement the EcoVadis validated supplier sustainability assessments by engaging over 70% of our suppliers by spend.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

Select from:

☒ No, this engagement is unrelated to meeting an environmental requirement

(5.11.7.11) Engagement is helping your tier 1 suppliers engage with their own suppliers on the selected action

Select from:

☒ Unknown

[Add row]

(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.

Climate change

(5.11.9.1) Type of stakeholder

Select from:

☒ Investors and shareholders

(5.11.9.2) Type and details of engagement

Education/Information sharing

☒ Share information on environmental initiatives, progress and achievements

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 26-50%

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

☒ None

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

In seeking stockholder perspectives, our governance-focused engagement team offered during 2024 to meet with a cross section of stockholders representing approximately half of our outstanding shares calculated as of December 31, 2024, and met with institutions representing half of our institutional shares outstanding. Our consistent, active and year-round dialogue with stockholders and other stakeholders enables our Board to consider a broad range of viewpoints in boardroom discussions. Example discussions held during these engagements include our long-term strategy and efforts to shift to a low-carbon future, with a focus on how we integrate sustainability in our products, operations and supply chain, address our Scope 3 greenhouse gas (GHG) emissions and manage environmental impacts of our business.

(5.11.9.6) Effect of engagement and measures of success

We provide transparent disclosure on our corporate governance and sustainability practices and approach, which we continually enhance with input from our stakeholders, including investors, as we believe that accountability to our stockholders is an important component of the Lockheed Martin's success. We seek feedback through stockholder engagement to inform our practices and provide transparent disclosure through proactive, year-end engagements. We also solicit ongoing investor feedback and communicate stockholder's views to the Board throughout the year, which informs our governance, compensation and environmental and social policies and business strategy. We believe good corporate governance strengthens the board and management, enhances public trust and generates long-term stockholder value. Additionally, our independent directors participate in select meetings to provide additional board-level insight. In 2024, we had a total of 87 engagements, representing 50% of institutional shares (37% of total outstanding shares). These engagements incorporated key topics in Board composition, climate and environmental stewardship, human rights, human capital management, executive compensation, amongst other matters.

[Add row]

(5.12) Indicate any mutually beneficial environmental initiatives you could collaborate on with specific CDP Supply Chain members.

Row 1

(5.12.2) Environmental issues the initiative relates to

Select all that apply

☒ Climate change

(5.12.4) Initiative category and type

Other

☒ Other initiative type, please specify

(5.12.5) Details of initiative

International Aerospace Environmental Group (IAEG) - Working Group 11

(5.12.6) Expected benefits

Select all that apply

☒ Increased transparency of upstream/downstream value chain

(5.12.7) Estimated timeframe for realization of benefits

Select from:

☒ 3-5 years

(5.12.8) Are you able to estimate the lifetime CO2e and/or water savings of this initiative?

Select from:

☒ No

(5.12.11) Please explain

Our current strategy includes collaborations across existing industry associations within our sector and across other sectors within our value chain, governed by robust compliance programs.

[Add row]

(5.13) Has your organization already implemented any mutually beneficial environmental initiatives due to CDP Supply Chain member engagement?

(5.13.1) Environmental initiatives implemented due to CDP Supply Chain member engagement

Select from:

☒ No, but we plan to within the next two years

(5.13.2) Primary reason for not implementing environmental initiatives

Select from:

☒ Not an immediate strategic priority

(5.13.3) Explain why your organization has not implemented any environmental initiatives

We are implementing decarbonization programs with suppliers as part of our sustainability efforts, with a focus on reducing greenhouse gas emissions, increasing energy efficiency, and promoting renewable energy. This is a collaborative initiative in its early stages.

[Fixed row]

C6. Environmental Performance - Consolidation Approach

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.

Climate change

(6.1.1) Consolidation approach used

Select from:

☒ Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

Organizational boundaries are defined in accordance with the World Resources Institute / World Business Council for Sustainable Development (WRI / WBCSD) "Greenhouse Gas Protocol: A Corporate & Accounting Reporting Standard (Revised Edition)." Lockheed Martin calculates greenhouse gas (GHG) emissions from company-owned and/or operated facilities that fall within the operational control boundary. Emissions are reported for four (4) categories of facilities: 1. Owned facilities (based on operational control); 2. Leased facilities (leased facilities for which Lockheed Martin has operational control); 3. Government Owned Contractor Operated (GOCO) facilities operated by Lockheed Martin (but are owned by Federal agencies); and, 4. Any combination of the categories above that are necessary for jurisdictional reporting (i.e., country, state, etc.) or are in support of any jurisdictional regulatory disclosure requirement.

Plastics

(6.1.1) Consolidation approach used

Select from:

☒ Other, please specify :not applicable

(6.1.2) Provide the rationale for the choice of consolidation approach

A consolidation approach for plastics is not material to our business operations and therefore not considered applicable.

Biodiversity

(6.1.1) Consolidation approach used

Select from:

☒ Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

Impacts on biodiversity are determined by our facilities and their operations.

[Fixed row]

C7. Environmental performance - Climate Change

(7.1) Is this your first year of reporting emissions data to CDP?

Select from:

☒ No

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

(7.1.1.1) Has there been a structural change?

Select all that apply

☒ Yes, a divestment

(7.1.1.2) Name of organization(s) acquired, divested from, or merged with

Lockheed Martin Commercial Engine Solutions

(7.1.1.3) Details of structural change(s), including completion dates

Lockheed Martin Commercial Engine Solutions was acquired by FTAI Aviation Ltd, from Lockheed Martin Canada. The transaction was completed in 2024 and was inclusive of a 526,000-square-foot aircraft engine maintenance repair facility located in Montréal, Québec.

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

	Change(s) in methodology, boundary, and/or reporting year definition?
	Select all that apply ☒ No

[Fixed row]

(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?

(7.1.3.1) Base year recalculation

Select from:

☒ Yes

(7.1.3.2) Scope(s) recalculated

Select all that apply

☒ Scope 1

☒ Scope 2, location-based

☒ Scope 2, market-based

(7.1.3.3) Base year emissions recalculation policy, including significance threshold

Baseline and historical data are updated during the month of January following the completion of each Go Green Reporting Year (November through October) to reflect changes in the organizational structure which occurred during that time. Any acquisitions or divestitures trigger a baseline review and the acquired or divested companies are added to or removed from the baseline year data as appropriate, based on GHG Protocol guidance. Lockheed Martin occasionally expands or consolidates facilities (both owned and leased) to adjust to growth or decline in business; these changes are considered to be organic growth / decline and do not trigger an adjustment to baseline year emissions.

(7.1.3.4) Past years' recalculation

Select from:

☒ Yes

[Fixed row]

(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.

Select all that apply

☒ Defra Environmental Reporting Guidelines: Including streamlined energy and carbon reporting guidance, 2019

☒ The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)

☒ The Greenhouse Gas Protocol: Corporate Value Chain (Scope 3) Standard

☒ US EPA Mandatory Greenhouse Gas Reporting Rule

☒ US EPA Emissions & Generation Resource Integrated Database (eGRID)

(7.3) Describe your organization's approach to reporting Scope 2 emissions.

	Scope 2, location-based	Scope 2, market-based	Comment
	Select from: ☒ We are reporting a Scope 2, location-based figure	Select from: ☒ We are reporting a Scope 2, market-based figure	Lockheed Martin discloses both Scope 2 location-based and market-based metrics.

[Fixed row]

(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?

Select from:

☒ No

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

10/31/2020

(7.5.2) Base year emissions (metric tons CO2e)

306230

(7.5.3) Methodological details

Methodology is aligned with the World Business Council for Sustainable Development (WBSCD)/World Resources Institute (WRI) Greenhouse Gas – A Corporate Accounting Standard.

Scope 2 (location-based)

(7.5.1) Base year end

10/31/2020

(7.5.2) Base year emissions (metric tons CO2e)

609090

(7.5.3) Methodological details

Methodology is aligned with the World Business Council for Sustainable Development (WBSCD)/World Resources Institute (WRI) Greenhouse Gas – A Corporate Accounting Standard.

Scope 2 (market-based)

(7.5.1) Base year end

10/31/2020

(7.5.2) Base year emissions (metric tons CO2e)

482231

(7.5.3) Methodological details

Methodology is aligned with the World Business Council for Sustainable Development (WBSCD)/World Resources Institute (WRI) Greenhouse Gas – A Corporate Accounting Standard.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

5176708

(7.5.3) Methodological details

PO transactions multiplied by the NAICS aligned emissions factor (EPA, “Without Margins”). Emissions factors are adjusted annually by industry specific “PPI” vs. USD2021. PG&S filtered by NAICS.

Scope 3 category 2: Capital goods

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

(7.5.3) Methodological details

PO transactions multiplied by the NAICS aligned emissions factor (EPA, "Without Margins"). Emissions factors are adjusted annually by industry specific "PPI" vs. USD2021. CG filtered by NAICS.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

78009

(7.5.3) Methodological details

Transmission and distribution (T&D) losses associated with electricity and natural gas calculated using the country-specific emission factors via UK DEFRA or Carbonfootprint.com. US electricity T&D losses are included in eGrid factors and are reported in our Scope 2 emissions. Emissions associated with natural gas were calculated using UK DEFRA factors for WTT-fuels.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

4775

(7.5.3) Methodological details

Upstream T&D emissions are based on weight and distance by mode of transport multiplied by the geographically associated emissions factor from US EPA or UK DEFRA.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

6333

(7.5.3) Methodological details

Waste emissions are calculated in accordance with Greenhouse Gas Protocol (GHGP) Corporate guidance. For combustion and recycling the factors consider transport to an energy recovery or materials reclamation facility only.

Scope 3 category 6: Business travel

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

126972

(7.5.3) Methodological details

Airfare, personal auto, and fuel receipts are each directly measured or calculated into miles or passenger-miles traveled. The distance is applied to US EPA emission factors unless the employee is designated within the UK (UK DEFRA). Hotel stays, rail travel, and bus travel can not be isolated accurately based on spend data, and are included within Scope 3 Category 1 emissions vs. Category 7.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

95307

(7.5.3) Methodological details

Emissions associated with employee commuting are estimated using a zip code comparison of the distance between each Lockheed Martin employee's home and assigned work location. Data is screened out if the commute is greater than 100 miles one way to account for discrepancies in reasonable work locations. In addition, Lockheed Martin tracks employee telecommuting schedules by identifying each employee with their expected time at their assigned work location: Group 1: Full time on site, Group 2: >=50%, Group 3: <50%, Group 4: Full time telework. Only employees in Groups 1, 2 and 3 are counted based on traditional commuting. Weighted business area emissions factors are calculated by year and applied by business area headcounts for each year. Assumes total daily distance is multiplied by an estimated 184 work days per year for Group 1, 138 days for Group 2, 46 for Group 3 based on a 4x10 work schedule. For our UK operations, we also calculate emissions for telework by including headcounts of employees in Group 4 and multiplying by the UK DEFRA emissions factor for telework. The emissions factors are adjusted based on the carbon intensity of each location vs. the UK national electricity average.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

10/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

20328231

(7.5.3) Methodological details

Emissions from use of sold products are estimated by conducting applied lifecycle assessment calculations based on emission intensity by product or fuel use of our top revenue producing programs with tangible product deliveries and is aligned with the GHG Protocol. - Aircraft (fixed-wing and rotary) produce more than 99% of our estimated emissions for this category. - Datasets for product deliveries align with quarter financial reporting and represent a reporting year of Oct.-Sept. 2019-2024 values are restated to reflect the temporal adjustments to quarterly reporting best aligned with our GHG reporting year of Nov.-Oct."

[Fixed row]

(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

Reporting year

(7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

0

(7.8.5) Please explain

Emissions associated with employee commuting are estimated using a zip code comparison of the distance between each LMC employee's home and assigned work location. Data is collected monthly and recalculated back to 2019 reporting year to reflect micro changes in employee counts and workforce classifications. Monthly distance based on schedule frequency and telecommuting classification. Telecommuting FTE-hrs are calculated in fulfillment of schedule and classification vs. Traditional commuting days. FTE-hrs are multiplied by the UK DEFRA emissions factor for telework. The emissions factors are adjusted based on the carbon intensity of each location vs. the UK national electricity average.

Upstream leased assets

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Leased assets are included in Lockheed Martin's Scope 1 and 2 emissions data in accordance with the operational control boundary.

Downstream transportation and distribution

(7.8.1) Evaluation status

Select from:

☒ Relevant, not yet calculated

(7.8.5) Please explain

Lockheed Martin manages the delivery of products and services directly to the customer and emissions are captured as either Scope 1 or Scope 3 Purchased Goods and Services. The number of deliveries of products handled by the customer is extremely small and is considered de minimis for Scope 3 reporting purposes. LMUK reporting is in direct support of the UK Carbon Reduction Plan. Future expansion to enterprise reporting is under review.

Processing of sold products

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Lockheed Martin primarily acts as the final point in the manufacturing and assembly of products before delivery to the customer, thus most of our products require no additional processing. Any processing of sold products is accounted for in our Scope 1 and Scope 2 emissions.

Use of sold products

(7.8.1) Evaluation status

0

(7.8.5) Please explain

- Emissions from use of sold products are estimated by conducting applied lifecycle assessment calculations based on emission intensity by product or fuel use of our top revenue producing programs with tangible product deliveries and is aligned with the GHG Protocol. - Aircraft (fixed-wing and rotary) produce more than 99% of our estimated emissions for this category. - Datasets for product deliveries align with quarter financial reporting and represent a reporting year of Oct.-Sept. 2019-2022 values are restated to reflect the temporal adjustments to quarterly reporting best aligned with our GHG reporting year of Nov.-Oct.

End of life treatment of sold products

(7.8.1) Evaluation status

Select from:

☒ Relevant, not yet calculated

(7.8.5) Please explain

Because of sensitive technology and impact to national security, end-of-life treatment of our products are tightly controlled by the US Government as our primary customer.

Downstream leased assets

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Lockheed Martin maintains several owned properties with portions of the space leased to other tenants. Because of the limited percentage of area represented by such examples (2.3% of all asset sqft), Lockheed Martin does not calculate emissions data for these tenants or consider it to be a relevant Scope 3 emission category. Other leased assets (e.g., products) do not make up a measurable percentage of annual revenue at Lockheed Martin.

Franchises

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Lockheed Martin does not own or operate any franchises.

Investments

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Lockheed Martin is not a financial institution and therefore does not meet the relevancy as stated in the Corporate Value Chain (Scope 3) Accounting and Reporting Standard.

Other (upstream)

(7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Select from:

☒ Decreased

(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

Change in renewable energy consumption

(7.10.1.1) Change in emissions (metric tons CO2e)

6505

(7.10.1.2) Direction of change in emissions

Select from:

☒ Decreased

(7.10.1.3) Emissions value (percentage)

1

(7.10.1.4) Please explain calculation

In 2024, we increased our percentage of electricity consumption from renewable sources. Including hydropower, we increased our percentage of renewable electricity from 29% in 2023 to 30%. Excluding hydropower, we increased our renewable electricity from 24% in 2023 to 25%. Changes in our renewable energy consumption are driven by our use of green tariffs and RECs as well as our onsite solar production.

Other emissions reduction activities

(7.10.1.1) Change in emissions (metric tons CO2e)

15950

(7.10.1.2) Direction of change in emissions

Select from:

☒ Decreased

(7.10.1.3) Emissions value (percentage)

2.3

(7.10.1.4) Please explain calculation

In 2023, we implemented 66 projects with an estimated 15,950 MT of annual carbon dioxide equivalent savings. The impact from these projects were realized in 2024.

Divestment

(7.10.1.1) Change in emissions (metric tons CO2e)

3609

(7.10.1.2) Direction of change in emissions

Select from:

☒ Decreased

(7.10.1.3) Emissions value (percentage)

0.5

(7.10.1.4) Please explain calculation

Emissions associated with Lockheed Martin Commercial Engine Solutions (LMCES) in 2023. Emissions for LMCES have been removed from consolidated emissions reporting in all reporting years since 2020.

Acquisitions

(7.10.1.1) Change in emissions (metric tons CO2e)

0

(7.10.1.4) Please explain calculation

No other

[Fixed row]

(7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?

Select from:

☒ Market-based

(7.12) Are carbon dioxide emissions from biogenic carbon relevant to your organization?

Select from:

☒ Yes

(7.12.1) Provide the emissions from biogenic carbon relevant to your organization in metric tons CO2.

(7.12.1.1) CO2 emissions from biogenic carbon (metric tons CO2)

(7.12.1.2) Comment

The Lockheed Martin facility in Owego, NY operated a heat steam system fueled by biomass, which shut down at the end of 2024. The metric tonnes of CO2e released were calculated based on the dry mass of wood burned.
[Fixed row]

(7.15) Does your organization break down its Scope 1 emissions by greenhouse gas type?

Select from:

☒ Yes

(7.15.1) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).

Row 1

(7.15.1.1) Greenhouse gas

Select from:

☒ CO2

(7.15.1.2) Scope 1 emissions (metric tons of CO2e)

280944

(7.15.1.3) GWP Reference

[Add row]

(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response.

Consolidated accounting group

(7.22.1) Scope 1 emissions (metric tons CO2e)

294431

(7.22.2) Scope 2, location-based emissions (metric tons CO2e)

526282

(7.22.3) Scope 2, market-based emissions (metric tons CO2e)

365395

(7.22.4) Please explain

Our Scope 1 and Scope 2 emissions do not include any other entities.

All other entities

(7.22.1) Scope 1 emissions (metric tons CO2e)

0

(7.22.2) Scope 2, location-based emissions (metric tons CO2e)

0

(7.22.3) Scope 2, market-based emissions (metric tons CO2e)

0

(7.22.4) Please explain

Our Scope 1 and Scope 2 emissions do not include any other entities.
[Fixed row]

(7.23) Is your organization able to break down your emissions data for any of the subsidiaries included in your CDP response?

Select from:

☒ No

(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

Row 1

(7.27.1) Allocation challenges

Select from:

☒ Doing so would require we disclose business sensitive/proprietary information

(7.27.2) Please explain what would help you overcome these challenges

This challenge can not be overcome at this time due to the sensitive and classified nature of our products.
[Add row]

(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

(7.28.1) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

Select from:
☒ Yes

(7.28.2) Describe how you plan to develop your capabilities

Lockheed Martin is actively looking for approaches that would allow accurate and functional allocation of emissions to the program or product level, and aligned with our enterprise level reporting. This activity is focused on expansion and augmentation of internal applications and knowledge sharing across the values chain, but remains in a non-applied state.
[Fixed row]

(7.29) What percentage of your total operational spend in the reporting year was on energy?

Select from:
☒ More than 0% but less than or equal to 5%

(7.30) Select which energy-related activities your organization has undertaken.

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of fuel (excluding feedstocks)	Select from:

	Indicate whether your organization undertook this energy-related activity in the reporting year
	☒ Yes
Consumption of purchased or acquired electricity	Select from: ☒ Yes
Consumption of purchased or acquired heat	Select from: ☒ Yes
Consumption of purchased or acquired steam	Select from: ☒ No
Consumption of purchased or acquired cooling	Select from: ☒ Yes
Generation of electricity, heat, steam, or cooling	Select from: ☒ Yes

[Fixed row]

(7.30.1) Report your organization's energy consumption totals (excluding feedstocks) in MWh.

Consumption of fuel (excluding feedstock)

(7.30.1.1) Heating value

Select from:

☒ HHV (higher heating value)

(7.30.1.2) MWh from renewable sources

32361

(7.30.1.3) MWh from non-renewable sources

1472826

(7.30.1.4) Total (renewable + non-renewable) MWh

1505187.00

Consumption of purchased or acquired electricity

(7.30.1.1) Heating value

Select from:

(7.53.1.80) Target status in reporting year

Select from:

☒ Underway

(7.53.1.82) Explain target coverage and identify any exclusions

The carbon target is a company-wide target meaning it covers 100% of our portfolio; our portfolio includes facilities which are within our operational control and which are operational.

(7.53.1.83) Target objective

Lockheed Martin recognizes the importance of effective strategic decarbonization programs and management of climate-related risk. We regularly explore opportunities to take more aggressive action to reduce our carbon emissions and increase our commitment to renewable energy sources. Our current goals were established following a thorough analysis of our operational footprint, technical opportunities and investment requirements. We used subject matter experts across all responsible functions, including sustainability, facilities, capital planning, energy and each of our business areas.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

Lockheed Martin plans to achieve our 2030 goal through energy efficiency, grid greening and renewable energy (onsite renewables, offsite PPAs, green tariffs, and renewable energy certificates). In 2024, we reduced Scope 1 and 2 absolute carbon emissions, vs. 2020 baseline, by 16.3% and exceeded our annual target of 14.4%. To learn more about our progress in 2024, see our Sustainability Report. <https://sustainability.lockheedmartin.com/sustainability/index.html>

(7.54.1.11) % share of low-carbon or renewable energy at end date of target

40

(7.54.1.12) % share of low-carbon or renewable energy in reporting year

25

(7.54.1.13) % of target achieved relative to base year

0.00

(7.54.1.14) Target status in reporting year

Select from:

☒ Underway

(7.54.1.16) Is this target part of an emissions target?

Yes. Our renewable energy goal supports achievement of “Abs 1” to reduce carbon emissions by 36% by 2030 from a 2020 baseline. The goal is to match 40% of electricity used across Lockheed Martin global operations with renewable energy by 2030. There is no base year comparison.

(7.54.1.17) Is this target part of an overarching initiative?

Select all that apply

☒ No, it's not part of an overarching initiative

(7.54.1.19) Explain target coverage and identify any exclusions

The renewable energy goal is a company-wide target meaning it covers 100% of our portfolio; our portfolio includes facilities which are within our operational control and which are operational.

(7.54.1.20) Target objective

Lockheed Martin recognizes the importance of effective strategic decarbonization programs and management of climate-related risk. We regularly explore opportunities to take more aggressive action to reduce our carbon emissions and increase our commitment to renewable energy sources. Our current goals were established following a thorough analysis of our operational footprint, technical opportunities and investment requirements. We used subject matter experts across all responsible functions, including sustainability, facilities, capital planning, energy and each of our business areas.

(7.54.1.21) Plan for achieving target, and progress made to the end of the reporting year

To meet our target, we continue to study and pursue additional on-site and off-site renewable generation projects and utility green tariff programs (excluding large hydropower and nuclear in alignment with the Green-e Renewable Energy Standard for Canada and the United States.) In 2024, we met expectations by using renewable energy for 25% of our total electricity across Lockheed Martin global operations. Our Troy, AL, site and the South Alabama Electricity Cooperative entered into a green tariff power purchase agreement in 2023 whereby the site will increase its usage of electricity from renewable sources from 10% to 40% by 2026. In 2024, we established new power purchase agreements at two of our Texas sites that will advance our use of renewable energy. Our Fort Worth agreement, which runs from 2026 to 2030, will add 40% of electricity demand from solar and wind projects, increasing total usage of renewable sources at the site to 61%. Our Grand Prairie agreement will provide 50% of its electricity from solar and wind projects from 2027 to 2031. To learn more about our progress in 2024, see our Sustainability Report. <https://sustainability.lockheedmartin.com/sustainability/index.html>

(7.54.3.6) Is this a science-based target?

Select from:

☒ Yes, we consider this a science-based target, but we have not committed to seek validation of this target by the Science Based Targets initiative within the next two years

(7.54.3.8) Scopes

Select all that apply

☒ Scope 1

☒ Scope 2

☒ Scope 3

(7.54.3.9) Greenhouse gases covered by target

Select all that apply

☒ Methane (CH4)

☒ Nitrous oxide (N2O)

☒ Carbon dioxide (CO2)

☒ Sulphur hexafluoride (SF6)

☒ Nitrogen trifluoride (NF3)

- ☒ Perfluorocarbons (PFCs)
- ☒ Hydrofluorocarbons (HFCs)

(7.54.3.10) Explain target coverage and identify any exclusions

Lockheed Martin UK Holdings Limited (Lockheed Martin UK) and its wholly owned subsidiaries, Lockheed Martin UK Limited, Lockheed Martin UK Ampthill Limited and Lockheed Martin UK Strategic Systems Limited, are committed to achieving Net Zero emissions from UK operations by 2050. Specific elements and goals of the Lockheed Martin program extend to Lockheed Martin's facilities across the world. Through our Go Green program, we drive operational improvements by reducing carbon emissions through energy efficiency and use of renewable energy, reducing facility water use and waste generation. In order to continue our progress to achieving Net Zero for UK operations, we have adopted carbon reduction targets specifically for our Lockheed Martin UK operations. This commitment is aligned with PPN 06/21 established by the UK government which requires federal suppliers to publish and commit to achieving Net Zero by 2050 is exceeding specified contract thresholds.

(7.54.3.11) Target objective

To achieve Net Zero across Scope 1, Scope 2, and multiple Scope 3 emissions categories by 2050 for Lockheed Martin operations in the United Kingdom, and in accordance with PPN 06/21.

(7.54.3.12) Do you intend to neutralize any residual emissions with permanent carbon removals at the end of the target?

Select from:

- ☒ Yes

(7.54.3.13) Do you plan to mitigate emissions beyond your value chain?

Select from:

- ☒ No, we do not plan to mitigate emissions beyond our value chain

(7.54.3.14) Do you intend to purchase and cancel carbon credits for neutralization and/or beyond value chain mitigation?

Select all that apply

- ☒ Yes, we plan to purchase and cancel carbon credits for neutralization at the end of the target

(7.54.3.15) Planned milestones and/or near-term investments for neutralization at the end of the target

None at this time.

(7.54.3.17) Target status in reporting year

Select from:

☒ Underway

(7.54.3.19) Process for reviewing target

The target is set in accordance with PPN 06/21 defined under UK government procurement. A commitment towards Net Zero was set by our UK businesses and evaluated by the country level leadership. Reporting is provided each year in April and reviewed by country level leadership with input and guidance provided by our enterprise Sustainability team.

[Add row]

(7.55) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.

Select from:

☒ Yes

(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.

	Number of initiatives	Total estimated annual CO2e savings in metric tonnes CO2e
Under investigation	18	`Numeric input
To be implemented	24	8757
Implementation commenced	19	14800
Implemented	69	14742
Not to be implemented	10	`Numeric input

[Fixed row]

(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.

Row 1

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

☒ Building Energy Management Systems (BEMS)

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

3756

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

☒ Scope 1

☒ Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

1014316

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

3886649

(7.55.2.7) Payback period

Select from:

☒ 1-3 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 16-20 years

(7.55.2.9) Comment

In 2024, 13 Building Control System projects were completed, each with an average estimated lifetime of 20 years and a collective payback period for the projects of 3.8 years. Multiple projects were completed at sites in Fort Worth, Sunnyvale and Colorado Springs, along with projects at Andover, Marietta, Troy, Santa Barbara, and Johnstown. The projects typically involved upgrades to the existing Building Control System to provide more capabilities or make better use of the existing Building Control System energy saving capabilities.

Row 2

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

☒ Other, please specify :Building Envelope

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

0

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

☒ Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

44244

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

442442

(7.55.2.7) Payback period

Select from:

☒ 4-10 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 16-20 years

(7.55.2.9) Comment

In 2024, one Building Envelope project was completed at our Ampthill, UK, site. A new building roof was installed with an average estimated lifetime of 20 years and an estimated collective payback period for the projects of 10 years.

Row 3

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in production processes

☒ Compressed air

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur*Select all that apply*☒ Scope 2 (location-based)**(7.55.2.4) Voluntary/Mandatory***Select from:*☒ Voluntary**(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)**

73333

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

450829

(7.55.2.7) Payback period*Select from:*☒ 4-10 years**(7.55.2.8) Estimated lifetime of the initiative***Select from:*☒ 16-20 years**(7.55.2.9) Comment**

In 2024, three compressed air projects were completed, each with an average estimated lifetime of 20 years and a collective payback period for the projects of 6.1 years. Projects were completed at sites in Fort Worth, Palmdale, and Ocala. Projects included compressor replacements with high efficiency units, along with modifications to more efficiently use site compressed air.

Row 4

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

☒ Heating, Ventilation and Air Conditioning (HVAC)

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

1851

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

☒ Scope 1

☒ Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

☒ Voluntary

7185870

(7.55.2.7) Payback period

Select from:

☒ 11-15 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 11-15 years

(7.55.2.9) Comment

In 2024, 16 HVAC projects were completed, each with an average estimated lifetime of 15 years and a collective payback period for the projects of 12.1 years. Projects included replacement of aging air-handling units, boilers, and chillers with high efficiency units while other projects upgraded existing equipment fans to make them more efficient.

Row 5

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

☒ Lighting

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

3505

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

☒ Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

1807356

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

11476167

(7.55.2.7) Payback period

Select from:

☒ 4-10 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 11-15 years

(7.55.2.9) Comment

In 2024, 24 Lighting projects were completed, each with an average estimated lifetime of 15 years and a collective payback period for the projects of 6.3 years. Projects upgraded to LED lighting in both office and operational spaces and typically also included enhanced lighting controls.

Row 6

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

☒ Other, please specify :Treasure hunt/micro-cogen

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

146

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

- ☒ Scope 1
- ☒ Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

- Select from:
- ☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

47695

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

269790

(7.55.2.7) Payback period

- Select from:
- ☒ 4-10 years

(7.55.2.8) Estimated lifetime of the initiative

- Select from:
- ☒ 16-20 years

(7.55.2.9) Comment

In 2024, three projects that fit into the Other category were completed, with an average estimated lifetime of 20 years and a collective payback period for the project of 5.7 years. The projects included two at the Fort Worth site resulting from a local “energy treasure hunt” program, and a small cogen installation at our site in Owego.

Row 7

(7.55.2.1) Initiative category & Initiative type

Low-carbon energy generation

☒ Solar PV

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

1507

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Select from:

☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

527800

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

9200000

(7.55.2.7) Payback period

Select from:

☒ 16-20 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 16-20 years

(7.55.2.9) Comment

In 2024, one renewable project was completed, with an average estimated lifetime of 20 years and a collective payback period for the project of 17.4 years. The project installed a second 2 MW onsite solar PV carport at Lockheed Martin's site in Orlando.

Row 8

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

☒ Other, please specify :Retro-Commissioning

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

646

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

☒ Scope 1

☒ Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

232411

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

84820

(7.55.2.7) Payback period

Select from:

☒ <1 year

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 6-10 years

(7.55.2.9) Comment

In 2024, one Retro-Commissioning project was completed, with an average estimated lifetime of 10 years and a collective payback period for the project of 0.4 years. The project involved a retro-commissioning project at Lockheed Martin's corporate headquarters facility in Bethesda, MD, which identified multiple energy efficiency opportunities through the utilities RCx rebate program.

Row 9

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

☒ Other, please specify :Steam

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

3001

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

☒ Scope 1

(7.55.2.4) Voluntary/Mandatory

Select from:

☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

866265

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

9587430

(7.55.2.7) Payback period

Select from:

☒ 11-15 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 16-20 years

(7.55.2.9) Comment

In 2024, seven Steam projects were completed, with an average estimated lifetime of 20 years and a collective payback period for the project of 11.1 years. Projects included continued work on a large, multi-year steam decentralization project at the Waterton, CO, site, and projects at our Marietta, GA, facility to optimize steam system efficiency.
[Add row]

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

- ☒ Dedicated budget for energy efficiency

(7.55.3.2) Comment

The Go Green gated capital program, managed by Lockheed Martin's corporate Environment, Safety, Health and Sustainability (ESHS) function, is a direct investment in emissions reduction activities. On an annual cycle, sites from across business areas submit potential energy and water efficiency projects to ESHS for review. Technically sound projects that meet certain financial thresholds are earmarked for Go Green gated capital and are included in the respective business area's overall capital plan.

Row 2

(7.55.3.1) Method

Select from:

- ☒ Compliance with regulatory requirements/standards

(7.55.3.2) Comment

Lockheed Martin is subject to the Federal Mandatory Greenhouse Gas (GHG) Reporting Rule, which requires our four largest facilities to report on their GHG emissions. Additionally, certain Lockheed Martin facilities are subject to state regulations, such as California's Global Warming Solutions Act of 2006 (AB32). Additionally, Lockheed Martin's enterprise ESH management system is ISO 14001 and 45001 certified and includes policies, strategies, common systems, functional procedures, metrics, programs and performance goals for business areas/elements.

Row 3

(7.55.3.1) Method

Select from:

- ☒ Employee engagement

(7.55.3.2) Comment

Lockheed Martin has partnered with the U.S. Department of Energy's Better Plants Program and the U.S. Environmental Protection Agency's ENERGY STAR Program and Green Power Partnership to take advantage of employee engagement and recognition opportunities, technical resources and expertise, and valuable peer networking opportunities offered through these partnerships, which have helped us in achieving our energy and carbon reduction goals.

[Add row]

(7.73) Are you providing product level data for your organization's goods or services?

Select from:

☒ No, I am not providing data

(7.74) Do you classify any of your existing goods and/or services as low-carbon products?

Select from:

☒ No

(7.79) Has your organization retired any project-based carbon credits within the reporting year?

Select from:

☒ No

C11. Environmental performance - Biodiversity

(11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?

(11.2.1) Actions taken in the reporting period to progress your biodiversity-related commitments

Select from:

☒ Yes, we are taking actions to progress our biodiversity-related commitments

(11.2.2) Type of action taken to progress biodiversity- related commitments

Select all that apply

- ☒ Land/water protection
- ☒ Land/water management
- ☒ Species management

[Fixed row]

(11.3) Does your organization use biodiversity indicators to monitor performance across its activities?

	Does your organization use indicators to monitor biodiversity performance?
	Select from: ☒ No

[Fixed row]

(11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year?

Legally protected areas

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ Yes

UNESCO World Heritage sites

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ No

(11.4.2) Comment

Lockheed Martin does not have any activities located in or near this type of area important for biodiversity.

UNESCO Man and the Biosphere Reserves

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ No

(11.4.2) Comment

Lockheed Martin does not have any activities located in or near this type of area important for biodiversity.

Ramsar sites

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ No

(11.4.2) Comment

Lockheed Martin does not have any activities located in or near this type of area important for biodiversity.

Key Biodiversity Areas

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ No

(11.4.2) Comment

Lockheed Martin does not have any activities located in or near this type of area important for biodiversity.

Other areas important for biodiversity

(11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

☒ Yes

(11.4.2) Comment

Lockheed Martin is committed to minimizing species and habitat impacts from our operations and construction projects by avoiding activities in wetland areas. See section 11.4.1 for details.

[Fixed row]

(11.4.1) Provide details of your organization's activities in the reporting year located in or near to areas important for biodiversity.

Select all that apply

- ☒ Physical controls
☒ Restoration

(11.4.1.11) Explain how your organization's activities located in or near to the selected area could negatively affect biodiversity, how this was assessed, and describe any mitigation measures implemented

Lockheed Martin is committed to minimizing species and habitat impacts from our operations and construction projects by avoiding activities in wetland areas. Our site in Sunnyvale, CA, borders the lower part of the San Francisco Bay, including its wetlands and channels populated by threatened and endangered species. To avoid areas of concern, we conducted a wetland delineation at the site to identify boundaries of existing wetlands. We also helped prevent impacts to surrounding wetlands by implementing a water capture and reuse process of our on-site vehicle washing station that prevents discharge of wastewater into adjacent wetlands.

Row 2

(11.4.1.2) Types of area important for biodiversity

Select from:

☒ Data not available

(11.4.1.8) Briefly describe your organization's activities in the reporting year located in or near to the selected area

In 2024, Lockheed Martin made a \$1.25 million grant that will accelerate The Nature Conservancy's (TNC's) projects to increase community resiliency near military installations and strategic training areas in Florida and Pennsylvania. Lockheed Martin has also supported TNC's conservation work along Maryland's Eastern Shore, which involved a three-year, \$2 million commitment.

(11.4.1.9) Indicate whether any of your organization's activities located in or near to the selected area could negatively affect biodiversity

Select from:

☒ Yes, but mitigation measures have been implemented

(11.4.1.10) Mitigation measures implemented within the selected area

Select all that apply

☒ Physical controls

☒ Restoration

(11.4.1.11) Explain how your organization's activities located in or near to the selected area could negatively affect biodiversity, how this was assessed, and describe any mitigation measures implemented

Lockheed Martin operates several facilities in the Chesapeake Bay Watershed that could negatively impact the ecosystem through water usage and emissions. One way Lockheed Martin is making a positive impact on the watershed is by helping to advance equitable climate adaptation strategies through a partnership with The Nature Conservancy (TNC). Our initial, 2 million commitment to the alliance, which began in 2021, supported a project to protect 4,000 acres of coastal marshland along Maryland's Eastern Shore through nature-based solutions. Our second 1.25 million grant established in 2024 will accelerate TNC's projects to increase community resiliency near military installations and strategic training areas in Florida and Pennsylvania. These include coastal rehabilitation, forest preservation and oyster reef restoration. These grants support engagement with communities by fostering relationships to shape climate resilience planning and ensures that TNC's work is integrating communities' perspectives and supporting local resilience goals. The funding further enables engagement with policymakers to advance equitable climate adaption, which includes investigating the feasibility of establishing blue carbon and/or resilience credit markets in partnership with the Maryland Department of Natural Resources. The coastal preservation project is part of the U.S. Department of Defense's (DOD) Readiness and Environmental Protection Integration Challenge, which aims to strengthen the resiliency of the DOD's vital U.S. infrastructure. Another way we are supporting the watershed is via annual contributions to the Chesapeake Bay Foundation for bay restoration efforts, such as education and bay restoration (including oyster reef repopulation).

(11.4.1.8) Briefly describe your organization's activities in the reporting year located in or near to the selected area

Lockheed Martin partnered with outside organizations to help protect biodiversity in Scotts Creek Watershed.

(11.4.1.9) Indicate whether any of your organization's activities located in or near to the selected area could negatively affect biodiversity

Select from:

☒ Yes, but mitigation measures have been implemented

(11.4.1.10) Mitigation measures implemented within the selected area

Select all that apply

☒ Physical controls

☒ Restoration

(11.4.1.11) Explain how your organization's activities located in or near to the selected area could negatively affect biodiversity, how this was assessed, and describe any mitigation measures implemented

Lockheed Martin operates several facilities California that could negatively impact the ecosystem through water usage and emissions. At our Santa Cruz, CA, site, we partner with outside organizations to help protect biodiversity in the Scotts Creek Watershed. The watershed supports threatened and endangered species, including California red-legged frogs, the California newt, coho salmon and steelhead trout. Working with the Scotts Creek Watershed Council and California Polytechnic State University's (CalPoly's) Swanton Pacific Ranch complex, grant funding received from federal and California fish and wildlife agencies enabled streambed sediment studies. We compiled inventories and implemented mitigation strategies to reduce sedimentation in the watershed caused by erosion and fire damage.

(13.1.1.4) Further details of the third-party verification/assurance process

Our total energy consumption reported and our total renewable energy reported in module 7 are verified to the AA1000AS standard as they are components of the reported progress on our renewable energy goal. Our progress towards our emissions reduction goals and our renewable energy target are verified to the AA1000AS standard to ensure strong and continuous performance and progress checks against these key goals. Our annual progress towards our intensity-based emissions reduction goal is verified to the AA1000AS standard to ensure strong and continuous performance and progress checks against these key goals. The majority of the emissions reductions initiatives reported on in question 7.55 are verified to the AA1000AS standard through our third-party verifier review of our annual sustainability report as these initiatives are included in the report. Our Sustainability Management Plan 2025 including the priority "advancing resource stewardship" were part of the assurance of the 2024 sustainability performance report according to the AA1000AS standard.

(13.1.1.3) Verification/assurance standard

General standards

☒ AA1000AS

☒ ISAE 3000

(13.1.1.4) Further details of the third-party verification/assurance process

Sustainability risks are integrated into Lockheed Martin's multi-disciplinary company-wide risk management procedures which also includes climate-related risks. In 2022, the company transitioned oversight of our sustainability initiatives from the Sustainability Leadership Council to our established Risk and Compliance Committee, further linking the management of enterprise risk and sustainability. Sustainability risk governance and management was part of the assurance of the 2024 sustainability performance report according to the AA1000AS standards.
